Re: Proposal for a AI-powered Credit Intelligence — digitizing secured MSME and corporate lending to complement OrooDigital and Milkii

Dear Sir/Madam,

On behalf of Seqela, we are pleased to submit the enclosed proposal for Oromia Bank's consideration — a proven **AI-powered Credit Intelligence** platform for secured MSME and corporate lending that complements OrooDigital and Milkii.

Milkii has demonstrated leadership in fast, collateral-free digital credit. The enclosed solution addresses the complementary need: branch-driven institutional credit where cashflow appraisal, GPS-governed collateral, document authentication, and multi-level committees determine portfolio quality and turnaround time.

The platform digitizes end-to-end secured lending — bilingual (English + Amharic) document authentication, a seven-step cashflow appraisal (MSME and corporate modes), field collateral with offline tablet support, and configurable Branch → District → Head Office committee decisioning — integrating with core banking for customer prefill while leaving disbursement in the Bank's system of record.

The proposal includes live system screenshots, a DECSI reference case, and a six-month path to a controlled pilot. We respectfully request a 90-minute live demonstration for Credit, Digital Banking, IT, and Risk leadership, and are ready to commence discovery upon your guidance.

Thank you for your time and consideration.

Yours sincerely,

For Seqela

BANKING TECHNOLOGY · ETHIOPIA

CONFIDENTIAL PROPOSAL

PREPARED FOR

Oromia Bank

Baankii Oromiyaa · Head Office, Addis Ababa

AI-powered Credit Intelligence

A complete digital credit factory for secured MSME and corporate lending — cashflow appraisal, bilingual document authentication, GPS-governed collateral, and multi-level committee decisioning — designed to complement OrooDigital and Milkii.

Faster decisions

Compress multi-level approvals from weeks toward days without weakening credit standards.

Stronger portfolio

Enforce DSCR, qualitative, E&S, and collateral coverage gates before committee.

Audit-ready files

One dossier: documents, scores, GPS evidence, votes, and lock history.

CBS complementary

Customer prefill from core banking; disbursement remains in the Bank's system of record.

Complements Milkii

Aligns with OrooDigital

Excel-faithful appraisal

GPS collateral evidence

NBE-ready controls

Live UI screenshots

1. Executive summary & the ask

3. Problems in institutional credit today

5. Solution overview & end-to-end lifecycle

7. Module A — Intake & document authentication

9. Module B2 — Corporate appraisal mode

11. Module D — GPS collateral & evidence packs

13. Roles, administration & reporting

15. Complete capability catalog

17. Reference case — DECSI

19. Implementation roadmap (6 months)

21. Appendix — screenshot index & glossary
2. Strategic fit with Milkii & OrooDigital

4. Day in the life — before vs after

6. Live system evidence — dashboards & pipeline

8. Module B — 7-step cashflow appraisal (MSME)

10. Module C — Scorecard, gates & analysis assist

12. Module E — Committees & approval queues

14. Core banking integration & security

16. Problem → solution → benefit matrix

18. Business case, ROI & cost of inaction

20. Engagement model, commercials path & next steps

Document control

ITEM	DETAIL
Audience	Credit, Digital Banking, IT, Risk & Compliance, Executive sponsors
Purpose	Secure approval to proceed to discovery + pilot for secured MSME/corporate credit digitization
Evidence	Screenshots captured from a live running instance of the AI-powered Credit Intelligence (July 2026)
Positioning	Complements Milkii (collateral-free digital); does not replace core banking

1. Executive Summary & The Ask

The ask: Approve a discovery workshop and fixed-scope pilot to deploy Seqela’s AI-powered Credit Intelligence for Oromia Bank’s secured MSME and corporate lending — extending the Bank’s digital leadership from Milkii into the institutional credit factory.

Oromia Bank has already demonstrated what digital credit can mean for customers through OrooDigital and Milkii. The remaining operational opportunity is the branch-driven process where most secured portfolio risk still lives: document chasing, Excel appraisal variance, informal field evidence, and slow multi-level approvals.

This Hub digitizes that factory end-to-end: bilingual (English + Amharic) document authentication, a seven-step cashflow appraisal for MSME and corporate modes, GPS-governed collateral with lock/audit/evidence packs, and configurable Branch → District → Head Office committees — sitting *beside* core banking, not replacing it.

50–70% Wait-time reduction target	Weeks → Days Approval cycle	95%+ Doc completeness goal	6 months Pilot-ready delivery
---	---------------------------------------	--------------------------------------	---

Board message: Milkii grows the retail book. AI-powered Credit Intelligence professionalizes institutional credit — protecting asset quality while accelerating turnaround and audit readiness.

What decision-makers get from saying yes

- **Credit:** One enforced methodology; DSCR, E&S, qualitative, and coverage gates before committee.
- **Operations:** Live pipeline, role queues, fewer customer callbacks, less rework.
- **Risk & Audit:** Reconstructable dossiers — documents, scores, GPS evidence, votes, lock history.
- **Digital / IT:** Docker/PostgreSQL deployment, CBS customer prefill, bank-controlled data residency.

2. Strategic Fit with Milkii & OrooDigital

This proposal is deliberately complementary. It does not ask Oromia Bank to change Milkii. It asks the Bank to extend the same digital ambition into secured and cashflow-based credit — where underwriting depth, collateral, and committees are non-negotiable.

Milkii — existing strength

- Collateral-free digital lending
- Retail / salary / BNPL-style products
- Loyalty and data-driven scoring
- Customer self-serve via app
- Speed and inclusion at scale

AI-powered Credit Intelligence — proposed

- Secured MSME & corporate facilities
- Cashflow / DSCR appraisal methodology
- GPS collateral valuation & evidence packs
- Officer → manager → committee workflow
- Policy gates, E&S, and audit governance

Why now (2026–2028 digital agenda)

- Corporate strategy prioritizes digital expansion and operational excellence beyond brick-and-mortar growth.
- Leadership has publicly emphasized that physical expansion alone is no longer sufficient.
- NBE expectations demand consistent methodology, E&S screening, identity assurance, and decision audit trails.
- Competitors who digitize secured credit first will win MSME customers who refuse to wait weeks.

Strategic framing: One bank. Two credit engines. Milkii for instant digital finance; AI-powered Credit Intelligence for disciplined institutional origination. Shared brand promise of modern, trustworthy banking.

3. Problems in Institutional Credit Today

When secured lending stays in paper and Excel, the Bank pays in cycle time, uneven risk, and audit cost:

PAIN POINT	WHAT HAPPENS	COST TO OROMIA BANK
Slow multi-level approvals	Files wait on desks; sequential Branch → District → HO handoffs	Lost customers, overtime, weak CX
Inconsistent Excel appraisal	Different officers apply different spreadsheet logic	Uneven portfolio quality across branches
Incomplete / weak documents	Customers return 2–3 times; weak identity checks	Rework, fraud gaps, delayed analysis
Collateral evidence gaps	Photos via WhatsApp; GPS unclear; coverage debated	Committee returns; weak security
No single pipeline view	“Where is my loan?” unanswered; late manual reports	Management by guesswork
Audit reconstruction pain	Rationale scattered across paper, email, Excel	High audit cost; regulatory findings
CBS re-keying	Same customer data typed again into appraisal	Typos, mismatches, delay
Rural connectivity	Field work stalls without reliable signal	Incomplete valuations; rescheduling

The following sections show, with live screenshots, exactly how AI-powered Credit Intelligence removes each of these frictions.

4. Day in the Life — Before vs After

Today — without the Hub

- Customer returns repeatedly with missing documents
- Officer re-keys CBS data into Excel
- Appraisal standards vary by officer
- Field photos informal; location disputed
- File sits waiting for physical sign-offs
- Committee gets incomplete packs
- Audit reconstruction takes days

Typical cycle: 2-6+ weeks

With the AI-powered Credit Intelligence

- Guided checklist + OCR blocks incomplete packs early
- Customer number prefills Sheet 1 from CBS
- One enforced 7-step methodology bank-wide
- GPS-attested visits; evidence pack for voters
- Digital queues with notifications
- Committee sees scorecard, DSCR, E&S, coverage
- Full trail: who did what, when, why

Target cycle: days, not weeks

End-to-end lifecycle (8 stages)

1. **Intake** — Create request; assign officer; customer number; CBS pull
2. **Documents** — Checklist; OCR eng+amh; identity match; verify/reject
3. **Appraisal** — Seven MSME/corporate sheets with policy gates
4. **Collateral** — Building/land/movable; GPS field; offline tablet
5. **Governance** — Submit & lock; unlock requests; engineering QA
6. **Pre-committee** — Operations and finance manager queues
7. **Committee** — Amount-routed multi-level vote; pack; return option
8. **Booking** — Handoff to core banking for disbursement

End-to-end system flow

Application → documents → collateral → appraisal → authorization → disbursement.

Figure 1 — End-to-end system flow (application → documents → collateral → appraisal → authorization → disbursement).

5. Solution Overview — Live System Evidence

The screenshots in this proposal were captured from a live running instance of the Hub. They show the actual operator experience Oromia Bank staff would use — not mockups.

5.1 Management dashboard & pipeline visibility

Problem solved: No single view of Total / Approved / Pending / Rejected; late manual reporting.

Figure 2 — Loan Dashboard: live totals, status distribution, and role navigation (Home, Loan requests, Catalog, Unit prices, Collateral, Users, Districts, Branches).

Bank benefit: Executives and admins manage by exception. Branch hierarchy is first-class (Districts / Branches / Area).

5.2 Centralized loan request pipeline

Search by name/ID/phone, filter by status and date, see assignment and review dates, and act from one table.

Figure 3 — View Loan Requests: searchable, filterable pipeline with status, assignee, and actions.

5.3 Loan detail — one record for every actor

From a single loan detail page, officers and managers see applicant context, documents, appraisal progress, collateral links, and next actions — ending the “file hunting” culture.

6. Module A — Intake & Document Authentication

Problem solved: Incomplete packs, weak identity assurance, trusted-but-unchecked attachments, repeated branch visits.

6.1 Create loan request (branch manager)

Figure 6 — Application Documents: required types, auth status (“Needs manual review”), View links, and replace-aware upload.

Bank benefit: Higher first-time completeness (target 95%+), fewer fraud gaps, cleaner files entering credit analysis.

7. Module B — 7-Step Cashflow Appraisal

Problem solved: Shadow Excel files and inconsistent underwriting across branches. AI-powered Credit Intelligence digitizes cashflow-based MSME methodology (with a corporate mode) as a guided wizard.

STEP	MSME	CORPORATE	LOCKS IN
1	Basic info & loan request	Entity KYC / legal registration	CBS/OCR provenance
2	Business & character (10 factors)	Governance & character	≥75% qualitative gate
3	Cashflow / DSCR / stress	Financial statements & ratios	Capacity vs ask
4	E&S — 21 items, 5 sections		PASS / ACTIONS / REJECT
5	Collateral worksheet		Coverage from field valuation
6	Summary, scorecard, recommendation		Approve / Decline / Escalate
7	Repayment & amortization		Schedule for booking

7.1 Sheet 1 — Basic info with core banking prefill

Customer number lookup fills empty fields. Conflicts are listed for officer Accept (banking wins). Every field shows provenance: Core banking / OCR / Officer.

This sheet: requirements met — (1) Basic Info and loan request.

Sheet 1: Basic Info & loan request

Client and business information. Applicant name, phone and amount are from the loan request. Badges show where each value came from. Fill order: **core banking** → **documents** → **officer**.

7.3 Sheet 3 — Cashflow, DSCR & stress

Monthly P&L, net cashflow, monthly/annual DSCR, stress test (sales drop / cost increase), max loan capacity, balance-sheet ratios, and a 12-month cashflow grid with “seed from averages.”

On Sheet 1, you may apply sales/purchases/loan variables to (optional) accept max capacity

Sheet 3: Cashflow analysis

Phase 0-2: monthly aggregates, optional P&L breakdown (Phase 1), and annual repayment capacity (Phase 2).

From Sheet 1 / loan request (reference): Amount requested: **2500000.00** · Term: 36 mo · Rate: 16.50% · Repayment: Monthly
Annual debt service uses 12 payment(s) per year from repayment frequency (installment × payments/year).

Phase 1 – Monthly P&L breakdown (optional)

If any expense line below is filled, their sum becomes *Monthly business expenses*. If *Monthly business income* is empty, *Monthly sales* is used as business income.

Cf monthly sales:	Cf monthly cogs:	Cf monthly salaries:	Cf monthly rent:
1850000.00	1280000.00	145000.00	45000.00
Cf monthly utilities:	Cf monthly transport:	Cf monthly other operating:	Cf monthly taxes:
18000.00	32000.00	55000.00	42000.00

Phase 0 – Monthly totals (aggregate)

Monthly business income:	Monthly business expenses:	Other monthly income:	Other monthly expenses:
1850000.00	1617000.00	25000.00	10000.00

Leave blank to use Monthly sales (Phase 1) as business income when sales is filled.

When P&L expense lines sum to more than 0, that sum replaces monthly business expenses.

Proposed monthly installment:

Computed – Net cashflow & DSCR

Net = (business income + other income) – (business expenses + other expenses). Saved when you submit.

Net monthly cashflow: 248000.00
Monthly DSCR (net ÷ proposed installment): 2.61

Stress test (simple sensitivity)

This applies a % drop to total monthly income and a % increase to total monthly expenses, then recomputes stressed net cashflow and DSCR.

Stress sales drop pct:	Stress cost increase pct:
15.00	10.00

Stressed net monthly cashflow: 145000.00

Figure 9 — Sheet 3 Cashflow analysis: DSCR, stress test, annual capacity, ratios, and 12-month grid — the analytical heart of MSME underwriting.

7.4 Sheets 4–7 — E&S, collateral, decision, amortization

Sheet 4 — E&S

21 checklist items in 5 sections; risk Low/Medium/High; eligibility PASS / PASS WITH ACTION POINTS / REJECT; sign-off trail.

Sheet 5 — Collateral worksheet

Prefills from field valuation; coverage ratio visible before decision.

Sheet 6 — Summary & decision

4-pillar scorecard, strengths/weaknesses, recommendation, recommended amount (drives committee routing).

Sheet 7 — Amortization

Generate repayment schedule for committee and CBS booking.

On Excel, not yet in app; key indicators before/after loan with rating/weight/earned score matrix + Summary of decision factors (qualitative, financial, E&S, collateral) with norms

Sheet 6: Summary & decision

Recommendation, strengths/weaknesses, committee comments and approved terms. The **explainable credit scorecard** below is the system source of truth for committee (not the Excel key-indicator matrix). Warnings and hard blocks use thresholds from **Admin → Loan analysis policy**.

Analysis assist

Read-only prompts from scorecard, bureau, and mode — not an auto-approve decision.

Weak Environmental & social pillar — 5/15 — E&S eligibility not set [Sheet 4](#)

Bureau band: A — Score 712.00 [Sheet 2](#)

Officer checklist (MSME / cashflow)

- Confirm personal + business details and purpose lines
- Complete MSME character factors (Sheet 2) to ≥75%
- Enter cashflow / DSCR and stress test (Sheet 3)
- Confirm collateral coverage (Sheet 5)
- Confirm identity / TIN (banking or documents) matches Sheet 1
- Complete Sheets 1–6; resolve hard blocks before finish
- Review explainable scorecard on Sheet 6 before recommendation

Explainable credit scorecard

Composite score from Cashflow MSME pillars — assistive only; officer recommendation still required. Rate workbook is not used.

83.1 / 100 **Band: Strong**

Pillar	Earned	Max	Remark
Qualitative / character	23.1	25	Total character score 92.50/100 — passed ≥75% gate
Financial / cashflow	30.0	35	DSCR + ratios financial pillar (30/35) [msme]
Environmental & social	5.0	15	E&S eligibility not set
Collateral coverage	25.0	25	Strong coverage

Recommendation & committee

Figure 10 — Sheet 6 Summary & decision with scorecard and officer recommendation (feeds committee).

Sheet 4 — Environmental & Social

21 checklist items across 5 sections; risk Low/Medium/High; eligibility PASS / PASS WITH ACTION POINTS / REJECT.

Sheet 4: E&S assessment

Environmental & social checklist (detail per Excel), then risk category, eligibility, reviewers, and notes.

Exposure & compliance

Question	Yes / No / N/A	Description / details	Mitigation / action
Does or will the client carry out any activities listed on the List of Excluded Activities? (If yes, describe in the adjacent column.)	— ▼	Reviewed during appraisal – no material concern.	
Are you the owner of the premises of the business?	— ▼	Reviewed during appraisal – no material concern.	
Would the proposed activity involve the displacement of people?	— ▼	Reviewed during appraisal – no material concern.	
Is the proposed activity situated within a green area designated by the municipality?	— ▼	Reviewed during appraisal – no material concern.	
Would the proposed project employ children under the age of 18?	— ▼	Reviewed during appraisal – no material concern.	
Were you provided assistance by the project staff in filling out this checklist?	— ▼	Reviewed during appraisal – no material concern.	

Enterprise & sub-project

Question	Yes / No / N/A	Description / details	Mitigation / action
Name of the representative of the enterprise, function and contact details (describe).	— ▼	Reviewed during appraisal – no material concern.	
Provide a brief technical description of the sub-project.	— ▼	Reviewed during appraisal	

Figure 11 — Sheet 4 Environmental & Social assessment checklist and risk decision.

7B. Corporate Appraisal Mode — Same Wizard, Different Depth

AI-powered Credit Intelligence is not MSME-only. When the loan product is configured as **Corporate**, the same seven-step wizard switches labels, KYC depth, qualitative factors, and financial statement fields — so commercial/corporate credit officers work in one platform.

MSME mode (shown earlier)

- Business & character (10 MSME factors)
- Cashflow analysis / monthly grid
- Owner/operator KYC focus

Corporate mode (this section)

- Governance & character (board, audit, covenants)
- Financial statements & cashflow + ratios
- Legal registration, directors & UBO summary

Live demo file: **Horizon Agro Industries PLC** — Corporate Term Loan — ETB 15,000,000 — Bishoftu Industrial Park, Oromia.

Cf monthly utilities: Cf monthly transport: Cf monthly other operating: Cf monthly taxes:

Phase 0 – Monthly totals (aggregate)

Monthly business income: Monthly business expenses: Other monthly income: Other monthly expenses:

15416666.67 12800000.00 250000.00 150000.00

Leave blank to use Monthly sales (Phase 1) as business income when sales is filled. When P&L expense lines sum to more than 0, that sum replaces monthly business expenses.

Proposed monthly installment: 420000.00

Computed – Net cashflow & DSCR

Net = (business income + other income) – (business expenses + other expenses). Saved when you submit.

Net monthly cashflow: 2716666.67
Monthly DSCR (net ÷ proposed installment): 6.47

Stress test (simple sensitivity)

Figure 14 — Corporate Sheet 3: financial statements & cashflow (annual revenue ETB 185m, DSCR 6.47, stressed DSCR 4.29).

Seqela · Confidential · Oromia Bank

21

Corporate decision pack

Sheet 6 recommendation and the committee pack use the same explainable scorecard — Strong band in this demo — so corporate files enter the same approval factory as MSME.

Corporate committee appraisal pack

Read-only pack for Horizon Agro Industries PLC — same explainable scorecard factory as MSME.

Figure 16 — Corporate committee appraisal pack (read-only) for Horizon Agro Industries PLC.

Bank benefit: One credit factory for MSME and corporate — product mode is configured per loan category, not a separate system.

8. Module C — Scorecard, Gates & Analysis Assist

Problem solved: Subjective “gut feel” decisions and files that reach committee before policy is met.

8.1 Explainable 4-pillar score (/100)

PILLAR	WEIGHT	WHAT IT MEASURES
Qualitative / character	25	Sheet 2 business & character quality
Financial / cashflow	35	DSCR, stress DSCR, capacity vs ask, ratios
Environmental & social	15	Risk category & eligibility outcome
Collateral coverage	25	Coverage vs ask (e.g. $\geq 1.5\times$ full points)

Bands: **Strong** ≥ 80 · Acceptable ≥ 60 · Weak ≥ 40 · Unacceptable < 40 .

8.2 Hard policy gates (bank-configurable)

- Qualitative $< 75\%$ → hard block
- E&S REJECT → hard block
- Annual / stressed DSCR < 1.0 → hard block
- Bureau defaults → hard block option
- Incomplete sheets 1–6 → cannot finish
- Collateral coverage warning at policy minimum (default $1.0\times$)

8.3 Analysis Assist — decision support, not auto-approve

Surfaces weak/thin pillars, ask vs max cashflow capacity, bureau flags (thin file, defaults, score/band), corporate registration/audit flags, and hard blocks — so officers fix issues before committee waste.

Credit philosophy: AI-powered Credit Intelligence enforces standards and explains risk. Humans still decide. That is how you win both Risk and Business sponsors.

9. Module D — GPS Collateral & Evidence Packs

Problem solved: WhatsApp photo chaos, unclear site presence, disputed coverage, weak dual control.

9.1 Field visit with offline sync & map verification

- Building BOQ (construction catalog × woreda unit prices), land, other/movable
- GPS site mark with accuracy; EXIF vs live GPS mismatch warnings
- Min photos (e.g. 5 building / 3 land); photo distance policy (default 200m)
- Offline tablet PWA: prepare offline → capture → Sync now
- Lock after submit; supervised unlock; engineering QA pipeline

The screenshot displays the 'Field visit — Veronica' app interface. At the top, a dark green navigation bar contains icons for Home, Loan requests, Catalog, Unit prices, Collateral, Users, Districts, Branches, Area, and Settings. Below the navigation bar, a header section shows the title 'Field visit — Veronica' and the identifier 'HK-000015919 · Aster Bekele Trading PLC'. A status bar indicates 'Online — field data syncs to the server.' with a red '0' icon, and buttons for 'Prepare offline' and 'Sync now'. A yellow banner states 'Collateral submitted — this visit is read-only.' Below this, a 4-step wizard is shown with steps: 1. Site & building (active), 2. BOQ quantities, 3. Photos, and 4. Review. The 'Step 1 — Site & building' section contains three input fields: 'Building name' (Veronica), 'Construction type' (Construction), and 'Floors'. Below the wizard, a 'Buildings' section shows a map with a field-site pin. The map is titled 'Buildings' and includes a 'woreda (for unit prices)' dropdown menu with 'Addis Ababa' selected. Below the map, there are three more dropdown menus: 'Zone', 'City / Woreda', and 'Building site GPS'. A note at the bottom of the map section states: 'Mark the registered collateral location on the map. Field photos will be compared to this'.

Figure 18 — Field visit: offline/sync bar, 4-step wizard (Site → BOQ → Photos → Review), GPS ($\pm 18m$), and map with field-site pin.

9.2 Collateral evidence pack for committee & audit

One dossier: coverage vs ask, policy checks, BOQ summary, GPS-tagged photos, map, and recent audit events — with Print/PDF, Export JSON, Export ZIP.

9.3 Policy configuration

Bank risk teams tune min photos, GPS accuracy thresholds, coverage minimums, and distance flags — without code changes.

Collateral field-work policy

Bank-wide thresholds for photos, GPS, coverage ratio, and submit rules. One configuration applies to all branches.

Min images per building:	5
Min images per land:	3
Min images per other item:	3
Gps accuracy weak threshold m:	100 Above this GPS accuracy (metres), officer attestation is required.
Photo max distance from site m:	200 Flag photos farther than this from registered site GPS.
Block submit on far photos:	☐ If enabled, photos beyond max distance block collateral submit.
Block submit on missing photo gps:	☐ If enabled, photos without GPS block collateral submit.
Min coverage ratio:	1.0000 Minimum collateral value ÷ loan amount (1.0 = 100%). Blocks submit if below.
Flag coverage below ratio:	1.0000 Advisory warning when coverage is below this ratio.
Declared address max distance from site m:	3000 Flag when geocoded declared address is farther than this from field site GPS.
Block submit on declared address mismatch:	☐ If enabled, large declared-address vs site GPS gap blocks collateral submit.
Require movable photo types:	☒ Require plate, full asset, and chassis/serial photos for vehicle/machinery items.
Exif gps mismatch warn m:	200 Warn when photo EXIF GPS differs from browser GPS by more than this (metres).
Block submit on exif gps mismatch:	☐ If enabled, large EXIF vs browser GPS mismatch blocks collateral submit.

Save policy

Cancel

Figure 20 — Collateral policy configuration (bank-tunable GPS and coverage rules).

Bank benefit: Committee-ready proof; dual control; rural-ready offline capture; reconstructable audit.

10. Module E — Approval Committee (live screenshots)

Problem solved: Incomplete packs, unclear routing, slow sequential sign-offs, and opaque returns. This section shows the *actual* committee workflow from the running system.

10.1 Officer submits to the approval committee

After Sheets 1–7 are finished, the loan officer submits the file to the configured Branch → District → Head Office → Management pathway, with optional notes for voters.

Figure 21 — Officer loan detail: approval committee status after submission (pending at Branch approval committee), with routing visibility.

10.2 My approval queue — votes waiting for you

Committee members open a dedicated queue of loans requiring their vote at the current level — no chasing paper files across desks.

Figure 22 — Approval queue (“My votes”): Aster Bekele Trading PLC awaiting Branch approval committee action.

10.3 Cast your vote at the current level

Voters see overall status, current level, approval routing/pipeline, Sheet 6 recommendation summary, link to the full appraisal pack, and a vote form (Approve / Decline, amount supported, comments). They can also **return to loan officer** with required feedback.

10.4 One-screen committee appraisal pack

Before voting, members open a read-only pack covering Sheets 1–7 — scorecard, cashflow/DSCR, E&S, collateral coverage, strengths/weaknesses — Print/PDF ready.

Figure 24 — Read-only committee appraisal pack for Aster Bekele Trading PLC (MSME / cashflow mode).

10.5 Amount-routed levels (configurable to Oromia Bank)

LEVEL	TYPICAL VOTERS	DEFAULT VOTES
Branch	Loan officer, branch manager, accountant	Min 2 approve / 2 decline
District	District manager + peers	2 / 2
Head office	Ops, finance, credit committee	2 / 2
Management	CEO / VP / board as configured	2 / 2

Outcomes: **Approve** · **Decline** · **Return to officer** with notes. Operations/finance queues provide pre-committee control when configured.

11. Roles, Administration & Reporting

Sixteen role types out of the box — renamed and scoped to Oromia Bank’s Branch → District/Region → Head Office model.

ROLE FAMILY	TYPICAL USE
Loan officer / branch manager	Documents, appraisal, request creation, committee submit
Engineer / engineering head	Catalog, unit prices, field visits, engineering QA
Operations / finance managers	Pre-committee approval queues
District / executives / committee	Escalated reviews and voting
Risk / auditor	Review access and audit trails
Admin	Users, products, geography, policy

Field tablet checklist

HK Loan Appraisal

Welcome, haben | [Notifications](#) | [Logout](#)

[Home](#) [Loan requests](#) [Catalog](#) [Unit prices](#) [Collateral](#) [Users](#) [Districts](#) [Branches](#) [Area](#) [Settings](#)

Tablet field checklist

Use this before leaving the branch and on site. GPS and camera need a **secure page** (HTTPS or localhost).

Secure context OK — GPS and camera are allowed by the browser on this page.

1. This browser page

- Host: 127.0.0.1:8000
- Server sees HTTPS: **no** (ok on http://localhost)
- HTTPS proxy mode: **off** — use HTTP on localhost, or start the HTTPS compose overlay for phones

2. Before leaving the branch (online)

- Open the app on the tablet via **HTTPS** (or http://localhost only on the laptop itself — phones need HTTPS).
- Accept the certificate warning once if using the local self-signed cert.
- Log in, open the loan → **Field visit** (or Summary).
- Tap **Prepare offline** so the loan is cached on this device.
- Optional: add the PWA to the home screen (browser menu → Install / Add to Home Screen).

3. On site (weak or no signal)

- Keep using the same tablet browser / installed PWA.
- Mark site GPS, take photos, enter BOQ / asset details — they queue on the device when offline.
- Do **not** expect final **Submit collateral** offline (policy and coverage stay online).

4. Back online

- Reconnect to branch Wi-Fi or mobile data.
- Tap **Sync now** (or wait for auto-sync) until the pending badge clears.
- Finish review, then **Submit collateral** from Summary.

5. Ops: enable HTTPS for LAN tablets

On the server / laptop that runs Docker:

Figure 29 — Field tablet checklist supporting offline collateral operations.

12. Core Banking Integration & Security

AI-powered Credit Intelligence is the **credit factory**. Core banking remains the system of record for accounts and disbursement. There is no Temenos-class rip-and-replace.

Customer lookup

Customer number → party API
→ name, phone, TIN, address,
gender, status (Temenos-style
aliases supported).

Smart prefill

Fills empty Sheet 1 fields;
conflicts listed for Accept;
provenance retained (banking /
OCR / officer).

Disbursement handoff

After final approval, booking
and fund release stay in CBS.

Controls Risk will respect

- Role-based access on every screen
- Document authentication status trail
- Field-source provenance
- Hard & soft policy gates
- Collateral lock + supervised unlock
- Field audit log (GPS, photos, unlocks, QA)
- Engineering dual control when enabled
- Committee votes with thresholds & return notes
- Evidence pack / dossier export (PDF/JSON/ZIP)
- E&S screening with eligibility decisions
- NBE credit-report / bureau flags on file
- Aligned to NBE credit governance expectations

Technology

Python / Django, PostgreSQL, Docker — on-premises or private cloud with bank-controlled data residency. Optional REST API for future channel integrations. Tesseract OCR (eng+amh). Leaflet maps for collateral.

13. Complete Capability Catalog

AREA	WHAT OROMIA BANK GETS
Intake	Loan requests, officer assignment, customer #, products, status tracking across branches
Documents	Configurable types, OCR eng+amh, identity match, integrity checks, verify/reject workflow
Appraisal	MSME + corporate 7-step cashflow; qualitative; DSCR; E&S 21 items; scorecard; assist; amortization
Collateral	Building BOQ catalog, land, movable; GPS rules; offline PWA; maps; coverage; evidence pack
Governance	Lock/unlock, engineering QA, audit log, policy config
Approvals	Ops/finance queues; 4-level committee; branch overrides; notifications
Admin	Geography, branches, users, categories, bulk CSV imports, analysis policy
Tech	Django + PostgreSQL + Docker; CBS customer API; optional REST

14. Problem → Solution → Benefit Matrix

PROBLEM	HUB RESPONSE	BENEFIT
Slow multi-level approvals	Digital queues, notifications, amount routing, return-with-notes	Weeks → days
Inconsistent Excel appraisal	Mandatory 7-step MSME/corporate wizard + completeness gates	One standard bank-wide
Incomplete / fake documents	Eng+Amh OCR, identity match, integrity checks, verify trail	Fewer rejections & fraud gaps
Weak collateral evidence	GPS rules, lock, eng QA, evidence pack	Committee-ready proof
No pipeline visibility	Role dashboards & status by branch	Manage by exception
Audit / NBE exposure	Scorecard, E&S, votes, field audit, dossier export	Audit in hours, not days
CBS vs appraisal mismatch	Customer # lookup + conflict-aware prefill	Less re-keying, cleaner KYC
Rural connectivity	Offline collateral PWA with later sync	Field work continues

15. Reference Case — DECSI

Designed around Dedebit Credit and Savings Institution (DECSI) practices — branch → district → HO, construction-based building valuation, and cashflow MSME appraisal.

50,000+ Loan applicants	30,000+ Approved loans	9+ Bn Birr disbursed (scale)	12–18 mo Projected break-even
-----------------------------------	----------------------------------	--	---

Expected operational benefits: 50–70% wait-time reduction, weeks-to-days multi-level approvals, 95%+ document completeness.

Reference: Tsige Bayray, Vice Chief of IT, DECSI · +251 914 701 978.

16. Business Case, ROI & Cost of Inaction

Revenue & growth • Faster turnaround → higher MSME conversion • More files per officer without proportional headcount • Competitive edge vs paper/Excel banks	Cost & risk • Less courier, printing, rework, overtime • Fewer weak approvals via DSCR/E&S/coverage gates • Lower audit cost via digital dossiers
--	--

Cost of waiting

- Competitors digitize first — MSME customers choose banks that answer in days.
- Portfolio quality drift — Excel variance creates invisible underwriting gaps.
- Staff cost rises with volume — without better control.
- Audit pressure rises as volume grows.

Build vs buy

BUILD YOURSELF	DEPLOY AI-POWERED CREDIT INTELLIGENCE WITH SEQELA
12–24+ months to parity; rediscover GPS/committee/appraisal edge cases; delayed credit factory	Proven Ethiopian MFI ops; Excel-faithful appraisal + GPS governance built; pilot in ~6 months

17. Implementation Roadmap (6 Months to Pilot)

PHASE	TIMING	FOCUS
Discovery	Month 1	Credit policy workshop, hierarchy mapping, CBS interface design, pilot selection, KPIs
Configure & integrate	Months 2–4	Appraisal modes, collateral catalog, committees, customer API, notifications, OB branding
UAT & harden	Month 5	Credit / Engineering / Risk UAT, security review, parallel-run samples
Pilot & train	Month 6	Pilot go-live, role training, hypercare, national rollout plan

Configured for Oromia Bank: branding, role hierarchy, loan products, appraisal modes, committee thresholds, collateral unit-price catalog, CBS hooks, policy gates (DSCR, E&S, coverage).

Pilot success metrics (agreed upfront): cycle time, document completeness %, committee return rate, collateral coverage adequacy, audit retrieval time.

18. Engagement Model & Next Steps

Low-risk path to “yes”

1. 90-minute live demonstration for Credit, IT, and Risk (walk the screens in this document live)
2. 2–3 week discovery and solution blueprint
3. Fixed-scope pilot (selected products and branches)
4. KPI review → network rollout with SLAs and support

What we need from Oromia Bank

- Executive sponsor (Credit / Digital)
- Sample MSME and corporate policy packs
- CBS customer API contact / sandbox
- Pilot branch and product shortlist
- Success KPIs agreed upfront

Detailed commercial terms (license/subscription, implementation, training, annual support) are issued after discovery confirms scope, integration depth, and hosting model.

Decide this week: Book the demo → share sample policy → name the pilot → receive discovery SOW and commercial quote.

19. Closing

Seqela is ready to help Oromia Bank extend its digital leadership into disciplined, high-quality institutional credit origination — preserving credit standards while compressing cycle times and strengthening audit readiness.

Milkii showed what digital credit can be for customers.

AI-powered Credit Intelligence shows what digital credit can be for the bank.

The screenshots in this proposal are not aspirational art — they are the working system. A live walkthrough can be arranged immediately for Credit, IT, and Risk leadership.
