Re: Partnership proposal — digitizing DBE's Cashflow-based MSME loan appraisal Excel into a shared platform for banks and microfinance institutions

Dear Sir/Madam,

On behalf of Seqela, we are pleased to submit this partnership proposal to the Development Bank of Ethiopia. DBE prepared and shared the **Cashflow-based MSME loan appraisal** Excel workbook so banks and MFIs could appraise MSME projects on cashflow capacity — not collateral alone. That methodology is sound. Adoption at scale is still blocked by spreadsheet variance, version drift, and weak operational workflow.

Seqela has fully digitized that workbook into a working **AI-powered Credit Intelligence** platform — seven guided sheets, DSCR and stress gates, bilingual document authentication, GPS collateral evidence, multi-level committee decisioning, Digital Apply, Seqela Market, Agentic Assist, Credit Intelligence dashboards, MFA, staff delegations, closing pack with e-signatures, and post-approval through Finance disbursement — already proven in live Ethiopian MFI operations.

We respectfully request DBE's partnership to **champion sector adoption** and help make the platform **affordable** for commercial banks and microfinance institutions — so the methodology DBE promoted becomes standard practice, not a file on a desktop.

We are ready to present a live demonstration to Credit, MSME/lease financing, IT, and partnership leadership, and to design a co-branded rollout and affordability model with DBE.

Thank you for your time and for DBE's leadership in cashflow-based MSME finance.

Yours sincerely,

For Seqela

CONFIDENTIAL PARTNERSHIP PROPOSAL

PREPARED FOR

Development Bank of Ethiopia

የኢትዮጵያ ልማት ባንክ · Your Development Partner · Head Office, Addis Ababa

From DBE's MSME Excel to a National Credit Factory

Seqela digitized the Cashflow-based MSME loan appraisal workbook DBE shared with banks and MFIs — and is ready to partner so the methodology scales affordably across the financial sector.

Excel → Platform

Faithful digitization of DBE's 7-sheet cashflow MSME methodology with policy gates.

Sector scale

One standard for banks and MFIs — less spreadsheet drift, stronger portfolio quality.

Affordable access

Partnership path so smaller FIs can adopt without heavy custom builds.

DBE as champion

Endorse, co-brand, and push adoption through wholesale, TA, and FI networks.

Built on DBE methodology

Banks & MFIs

Excel-faithful

Digital Apply

Agentic Assist

Post-approval → Finance

Document control

ITEM	DETAIL
Audience	DBE Credit, MSME/Lease Financing, IT, External Fund & Credit Management, Partnerships, Executive sponsors
Purpose	Secure DBE partnership to digitize and scale cashflow-based MSME appraisal across banks and MFIs — affordably
Evidence	Screenshots from a live instance of AI-powered Credit Intelligence (July–August 2026); methodology aligned to DBE cashflow MSME workbook
Positioning	Complements DBE's role as methodology owner and wholesale/development partner; does not replace DBE core systems

1. Executive Summary & The Ask to DBE

The ask: Partner with Seqela to endorse, co-brand, and roll out a digital platform that faithfully automates DBE's Cashflow-based MSME loan appraisal Excel — and help structure an affordable path so commercial banks and microfinance institutions can adopt it at scale.

DBE prepared the Excel workbook and shared it so institutions financing MSME projects could underwrite on cashflow capacity, DSCR, character, E&S, and collateral coverage — not informal judgment or collateral alone. That was the right national standard.

The remaining gap is operational: Excel files fork by branch, formulas change quietly, officers re-key data, committees receive incomplete packs, and smaller MFIs cannot afford to build their own systems. Seqela has already closed that gap with a live platform used in Ethiopian MFI credit operations.

7 sheets

DBE Excel → digital wizard

Banks + MFIs

Target adopters

Affordable

Shared / tiered pricing path

~1 month

Pilot start after requirements

Board message: DBE defined the credit language. Seqela built the factory. Together, make cashflow-based MSME appraisal the default across Ethiopia's banks and MFIs — without forcing every institution to reinvent software.

What DBE gets from saying yes

- **Mission delivery:** The methodology DBE promoted becomes enforceable practice, not a shared file.
- **Portfolio quality upstream:** Better appraised MSME files from partner banks/MFIs in wholesale and project ecosystems.
- **Sector leadership:** Visible digital public-good role — standard tool + affordability pathway.
- **Optional DBE use:** Same platform can support DBE's own MSME/lease appraisal workflows if desired.

What adopting banks & MFIs get (full credit factory)

- **Customers:** Digital Apply — register, apply, fee, Queue ID, notices, repayment schedule after approval.
- **Credit / branches:** 7-step DBE-faithful appraisal, GPS collateral, Agentic Assist, staff delegations.
- **Committees / Finance:** Complete packs; closing pack & e-signatures; Finance disbursement queue.
- **Risk, IT, management:** MFA, Risk Desk, Credit Intelligence dashboards, on-premises data, reconstructable dossiers.
- **Market:** Seqela Market price bands from dealers and cooperatives for collateral and credit.

2. DBE's Excel — Intent vs Adoption Reality

The Cashflow-based MSME loan appraisal workbook was designed to give banks and MFIs a common, rigorous way to assess MSME projects — especially where physical collateral is thin and repayment capacity must be proven.

What DBE shared (intent)

- Standard MSME cashflow appraisal language
- Character / qualitative factors
- Cashflow, DSCR, stress testing
- E&S screening
- Collateral worksheet & decision summary
- Shared freely / promoted to FIs

What still happens in practice

- Multiple Excel versions across branches
- Formula edits and local “shortcuts”
- No enforced completeness gates
- Weak document & GPS evidence linkage
- Committee packs assembled manually
- Smaller MFIs struggle with capacity & cost

Why this matters for DBE now

- DBE finances and enables MSME ecosystems through project finance, lease finance, and wholesale channels to banks/MFIs.
- If partner FIs underwrite inconsistently, portfolio quality and development outcomes suffer upstream.
- Digitizing the methodology DBE already authored is the highest-leverage way to raise standards sector-wide.
- Affordability matters: without a shared platform model, only large banks can build; MFIs stay on fragile spreadsheets.

Strategic framing: DBE owns the methodology. Seqela operates the digital factory. Banks and MFIs get a standard they can afford. MSME borrowers get faster, fairer, cashflow-based decisions.

3. Why Banks & MFIs Still Struggle with the Workbook

When the national methodology lives only as Excel, banks and MFIs pay in cycle time, uneven risk, and audit cost — and DBE's standard does not travel intact:

PAIN POINT	WHAT HAPPENS	COST TO BANKS / MFIS
Slow multi-level approvals	Files wait on desks; sequential Branch → District → HO handoffs	Lost customers, overtime, weak CX
Inconsistent Excel appraisal	Different officers apply different spreadsheet logic	Uneven portfolio quality across branches
Incomplete / weak documents	Customers return 2–3 times; weak identity checks	Rework, fraud gaps, delayed analysis
Collateral evidence gaps	Photos via WhatsApp; GPS unclear; coverage debated	Committee returns; weak security
No single pipeline view	"Where is my loan?" unanswered; late manual reports	Management by guesswork
Audit reconstruction pain	Rationale scattered across paper, email, Excel	High audit cost; regulatory findings
CBS re-keying	Same customer data typed again into appraisal	Typos, mismatches, delay
Rural connectivity	Field work stalls without reliable signal	Incomplete valuations; rescheduling

The following sections show, with live screenshots, exactly how Seqela's platform removes each of these frictions while staying faithful to DBE's cashflow MSME sheets.

4. Day in the Life — Excel Workbook vs Digital Factory

Today — with shared Excel only

- Customer returns repeatedly with missing documents
- Officer re-keys CBS data into Excel
- Appraisal standards vary by officer
- Field photos informal; location disputed
- File sits waiting for physical sign-offs
- Committee gets incomplete packs
- Audit reconstruction takes days

Typical cycle: 2-6+ weeks

With Seqela's digital factory (DBE-faithful)

- Digital Apply or staff intake; OCR blocks incomplete packs early
- Customer number prefills Sheet 1 from CBS
- One enforced 7-step methodology + 5-pillar scorecard
- GPS-attested visits; evidence pack; Market price bands
- Digital queues, Agentic Assist, Risk Desk, MFA
- Committee sees scorecard, DSCR, E&S, coverage
- Closing pack → e-sign → Finance disbursement; full audit trail

Target cycle: days, not weeks

End-to-end lifecycle (full factory)

1. **Intake** — Digital Apply or staff create; assign officer; customer number; CBS pull
2. **Documents** — Per-product packs; OCR eng+amh; identity match; verify/reject
3. **Appraisal** — Seven MSME/corporate sheets; 5-pillar scorecard; policy gates; Agentic Assist
4. **Collateral** — Building/land/movable; GPS field; offline tablet; Seqela Market price bands
5. **Governance** — Submit & lock; unlock; engineering QA; Risk Desk gate; MFA & delegations
6. **Pre-committee** — Operations and finance manager queues
7. **Committee** — Amount-routed multi-level vote; pack; return option
8. **Post-approval** → **Finance** — Closing pack, e-signatures, schedule confirm, disbursement queue, optional CBS booking

End-to-end system flow

Application → documents → collateral → appraisal → authorization → disbursement.

Figure 1 — End-to-end system flow (application → documents → collateral → appraisal → authorization → disbursement).

5. Solution Overview — Live System Evidence

The screenshots in this proposal were captured from a live running instance. They show the operator experience banks and MFIs would use — not mockups — and map sheet-by-sheet to the Cashflow-based MSME loan appraisal workbook.

5.1 Management dashboard & pipeline visibility

Problem solved: No single view of Total / Approved / Pending / Rejected; late manual reporting.

Figure 2 — Loan Dashboard: live totals, status distribution, and role navigation (Home, Loan requests, Catalog, Unit prices, Collateral, Users, Districts, Branches).

Bank benefit: Executives and admins manage by exception. Branch hierarchy is first-class (Districts / Branches / Area).

5.2 Centralized loan request pipeline

Search by name/ID/phone, filter by status and date, see assignment and review dates, and act from one table.

Figure 3 — View Loan Requests: searchable, filterable pipeline with status, assignee, and actions.

5.3 Loan detail — one record for every actor

From a single loan detail page, officers and managers see applicant context, documents, appraisal progress, collateral links, and next actions — ending the “file hunting” culture.

6. Module A — Intake & Document Authentication

Problem solved: Incomplete packs, weak identity assurance, trusted-but-unchecked attachments, repeated branch visits.

6.1 Create loan request (branch manager)

6.2 Application documents with auth workflow

- Configurable required document types (e.g. National ID, TIN, Business licence)
- Pre-upload validation: extension, size, MIME/type, content checks
- OCR in **English + Amharic**
- Identity matching on name / phone / TIN (optional business name)
- Statuses: Pending → Auto-passed → Needs manual review → Verified / Rejected

Figure 6 — Application Documents: required types, auth status (“Needs manual review”), View links, and replace-aware upload.

Bank benefit: Higher first-time completeness (target 95%+), fewer fraud gaps, cleaner files entering credit analysis.

7. Module B — 7-Step Cashflow Appraisal

Problem solved: Shadow Excel files and inconsistent underwriting across branches. Seqela digitizes DBE's cashflow-based MSME methodology (with a corporate mode) as a guided wizard — same credit language officers already learned from the workbook.

STEP	MSME	CORPORATE	LOCKS IN
1	Basic info & loan request	Entity KYC / legal registration	CBS/OCR provenance
2	Business & character (10 factors)	Governance & character	≥75% qualitative gate
3	Cashflow / DSCR / stress	Financial statements & ratios	Capacity vs ask
4	E&S — 21 items, 5 sections		PASS / ACTIONS / REJECT
5	Collateral worksheet		Coverage from field valuation
6	Summary, scorecard, recommendation		Approve / Decline / Escalate
7	Repayment & amortization		Schedule for booking

7.1 Sheet 1 — Basic info with core banking prefill

Customer number lookup fills empty fields. Conflicts are listed for officer Accept (banking wins). Every field shows provenance: Core banking / OCR / Officer.

Sheet 1: Basic Info & loan request

Client and business information. Applicant name, phone and amount are from the loan request. Badges show where each value came from. Fill order: **core banking** → **documents** → **officer**.

Existing loans / leases

For each existing loan or lease: Lender, Amount, Balance, Maturity, Purpose, Status, Repayment, Letter from lender, Score.

Lender	Loan amount	Current balance	Maturity date	Purpose	Status	Repayment	Letter from lender	Score	Del.
			mm/dd/yyyy 📅	▼	▼	▼	▼		☐

Figure 8 — Sheet 2 Business & character assessment with structured qualitative factors and NBE credit-report flags.

7.3 Sheet 3 — Cashflow, DSCR & stress

Monthly P&L, net cashflow, monthly/annual DSCR, stress test (sales drop / cost increase), max loan capacity, balance-sheet ratios, and a 12-month cashflow grid with “seed from averages.”

On Sheet 1, you may apply sales/purchases/loan variables to (optional) accept final details.

Sheet 3: Cashflow analysis

Phase 0-2: monthly aggregates, optional P&L breakdown (Phase 1), and annual repayment capacity (Phase 2).

From Sheet 1 / loan request (reference): Amount requested: **2500000.00** · Term: 36 mo · Rate: 16.50% · Repayment: Monthly
Annual debt service uses 12 payment(s) per year from repayment frequency (installment × payments/year).

Phase 1 – Monthly P&L breakdown (optional)

If any expense line below is filled, their sum becomes *Monthly business expenses*. If *Monthly business income* is empty, *Monthly sales* is used as business income.

Cf monthly sales:	Cf monthly cogs:	Cf monthly salaries:	Cf monthly rent:
1850000.00	1280000.00	145000.00	45000.00
Cf monthly utilities:	Cf monthly transport:	Cf monthly other operating:	Cf monthly taxes:
18000.00	32000.00	55000.00	42000.00

Phase 0 – Monthly totals (aggregate)

Monthly business income:	Monthly business expenses:	Other monthly income:	Other monthly expenses:
1850000.00	1617000.00	25000.00	10000.00

Leave blank to use Monthly sales (Phase 1) as business income when sales is filled.
When P&L expense lines sum to more than 0, that sum replaces monthly business expenses.

Proposed monthly installment:
95000.00

Computed – Net cashflow & DSCR

Net = (business income + other income) – (business expenses + other expenses). Saved when you submit.

Net monthly cashflow: 248000.00
Monthly DSCR (net ÷ proposed installment): 2.61

Stress test (simple sensitivity)

This applies a % drop to total monthly income and a % increase to total monthly expenses, then recomputes stressed net cashflow and DSCR.

Stress sales drop pct:	Stress cost increase pct:
15.00	10.00

Stressed net monthly cashflow: 145000.00

Figure 9 — Sheet 3 Cashflow analysis: DSCR, stress test, annual capacity, ratios, and 12-month grid — the analytical heart of MSME underwriting.

7.4 Sheets 4–7 — E&S, collateral, decision, amortization

Sheet 4 — E&S

21 checklist items in 5 sections; risk Low/Medium/High; eligibility PASS / PASS WITH ACTION POINTS / REJECT; sign-off trail.

Sheet 5 — Collateral worksheet

Prefills from field valuation; coverage ratio visible before decision.

Sheet 6 — Summary & decision

5-pillar scorecard, strengths/weaknesses, recommendation, recommended amount (drives committee routing).

Sheet 7 — Amortization

Generate repayment schedule for committee and CBS booking.

On Excel, not yet in app; key indicators before/after loan with rating/weight/earned score matrix + Summary of decision factors (qualitative, financial, E&S, collateral) with norms

Sheet 6: Summary & decision

Recommendation, strengths/weaknesses, committee comments and approved terms. The **explainable credit scorecard** below is the system source of truth for committee (not the Excel key-indicator matrix). Warnings and hard blocks use thresholds from **Admin** → **Loan analysis policy**.

Analysis assist

Read-only prompts from scorecard, bureau, and mode — not an auto-approve decision.

Weak Environmental & social pillar — 5/15 — E&S eligibility not set [Sheet 4](#)

Bureau band: A — Score 712.00 [Sheet 2](#)

Officer checklist (MSME / cashflow)

- Confirm personal + business details and purpose lines
- Complete MSME character factors (Sheet 2) to ≥75%
- Enter cashflow / DSCR and stress test (Sheet 3)
- Confirm collateral coverage (Sheet 5)
- Confirm identity / TIN (banking or documents) matches Sheet 1
- Complete Sheets 1–6; resolve hard blocks before finish
- Review explainable scorecard on Sheet 6 before recommendation

Explainable credit scorecard

Composite score from Cashflow MSME pillars — assistive only; officer recommendation still required. Rate workbook is not used.

83.1 / 100 **Band: Strong**

Pillar	Earned	Max	Remark
Qualitative / character	23.1	25	Total character score 92.50/100 — passed ≥75% gate
Financial / cashflow	30.0	35	DSCR + ratios financial pillar (30/35) [msme]
Environmental & social	5.0	15	E&S eligibility not set
Collateral coverage	25.0	25	Strong coverage

Recommendation & committee

Figure 10 — Sheet 6 Summary & decision with scorecard and officer recommendation (feeds committee).

Sheet 4 — Environmental & Social

21 checklist items across 5 sections; risk Low/Medium/High; eligibility PASS / PASS WITH ACTION POINTS / REJECT.

Sheet 4: E&S assessment

Environmental & social checklist (detail per Excel), then risk category, eligibility, reviewers, and notes.

Exposure & compliance

Question	Yes / No / N/A	Description / details	Mitigation / action
Does or will the client carry out any activities listed on the List of Excluded Activities? (If yes, describe in the adjacent column.)	— ▼	Reviewed during appraisal – no material concern.	
Are you the owner of the premises of the business?	— ▼	Reviewed during appraisal – no material concern.	
Would the proposed activity involve the displacement of people?	— ▼	Reviewed during appraisal – no material concern.	
Is the proposed activity situated within a green area designated by the municipality?	— ▼	Reviewed during appraisal – no material concern.	
Would the proposed project employ children under the age of 18?	— ▼	Reviewed during appraisal – no material concern.	
Were you provided assistance by the project staff in filling out this checklist?	— ▼	Reviewed during appraisal – no material concern.	

Enterprise & sub-project

Question	Yes / No / N/A	Description / details	Mitigation / action
Name of the representative of the enterprise, function and contact details (describe).	— ▼	Reviewed during appraisal – no material concern.	
Provide a brief technical description of the sub-project.	— ▼	Reviewed during appraisal	

Figure 11 — Sheet 4 Environmental & Social assessment checklist and risk decision.

7B. Corporate Appraisal Mode — Same Wizard, Different Depth

AI-powered Credit Intelligence is not MSME-only. When the loan product is configured as **Corporate**, the same seven-step wizard switches labels, KYC depth, qualitative factors, and financial statement fields — so commercial/corporate credit officers work in one platform.

MSME mode (shown earlier)

- Business & character (10 MSME factors)
- Cashflow analysis / monthly grid
- Owner/operator KYC focus

Corporate mode (this section)

- Governance & character (board, audit, covenants)
- Financial statements & cashflow + ratios
- Legal registration, directors & UBO summary

Live demo file: **Horizon Agro Industries PLC** — Corporate Term Loan — ETB 15,000,000 — Bishoftu Industrial Park, Ethiopia.

Figure 13 — Corporate Sheet 2: Governance & character scorecard (qualitative total 100 — passed).

Corporate Sheet 3 — Financial statements & cashflow

Corporate annual revenue / operating profit, balance-sheet ratios, DSCR and stress testing — sized for larger facilities.

Sheet 1

Sheet 2

Sheet 3

Sheet 4

Sheet 5

Sheet 6

Sheet 7

From Sheet 1 / loan request (reference):

Amount requested: 15000000.00 · Term: 60 mo · Rate: 15.75% · Repayment: Quarterly

Annual debt service uses 4 payment(s) per year from repayment frequency (installment × payments/year).

Phase 1 – Monthly P&L breakdown (optional)

If any expense line below is filled, their sum becomes Monthly business expenses. If Monthly business income is empty, Monthly sales is used as business income.

Cf monthly sales:

Cf monthly cogs:

Cf monthly salaries:

Cf monthly rent:

Cf monthly utilities:

Cf monthly transport:

Cf monthly other operating:

Cf monthly taxes:

Phase 0 – Monthly totals (aggregate)

Monthly business income:

15416666.67

Leave blank to use Monthly sales (Phase 1) as business income when sales is filled.

Monthly business expenses:

12800000.00

When P&L expense lines sum to more than 0, that sum replaces monthly business expenses.

Other monthly income:

250000.00

Other monthly expenses:

150000.00

Proposed monthly installment:

420000.00

Computed – Net cashflow & DSCR

Net = (business income + other income) – (business expenses + other expenses). Saved when you submit.

Net monthly cashflow: 2716666.67

Monthly DSCR (net ÷ proposed installment): 6.47

Stress test (simple sensitivity)

Figure 14 — Corporate Sheet 3: financial statements & cashflow (annual revenue ETB 185m, DSCR 6.47, stressed DSCR 4.29).

Seqela · Confidential · Development Bank of Ethiopia

22

Corporate decision pack

Sheet 6 recommendation and the committee pack use the same explainable scorecard — Strong band in this demo — so corporate files enter the same approval factory as MSME.

Corporate committee appraisal pack

Read-only pack for Horizon Agro Industries PLC — same explainable scorecard factory as MSME.

Figure 16 — Corporate committee appraisal pack (read-only) for Horizon Agro Industries PLC.

Bank benefit: One credit factory for MSME and corporate — product mode is configured per loan category, not a separate system.

8. Module C — Scorecard, Gates & Analysis Assist

Problem solved: Subjective “gut feel” decisions and files that reach committee before policy is met.

8.1 Explainable 5-pillar score (/100)

PILLAR	WEIGHT	WHAT IT MEASURES
Qualitative / character	20	Sheet 2 business & character quality (governance in corporate mode)
Financial / cashflow	30	DSCR, stress DSCR, capacity vs ask, ratios
Banking & bureau conduct	20	CBS turnover, transaction behaviour, bureau flags from Sheet 2 refresh
Environmental & social	15	Risk category & eligibility outcome
Collateral coverage	15	Coverage vs ask (policy minimums configurable)

Bands: **Strong** ≥ 80 · Acceptable ≥ 60 · Weak ≥ 40 · Unacceptable < 40 .

8.2 Hard policy gates (bank-configurable)

- Qualitative $< 75\%$ → hard block
- E&S REJECT → hard block
- Annual / stressed DSCR < 1.0 → hard block
- Bureau defaults → hard block option
- Incomplete sheets 1–6 → cannot finish
- Collateral coverage warning at policy minimum (default 1.0×)

8.3 Analysis Assist — decision support, not auto-approve

Surfaces weak/thin pillars, ask vs max cashflow capacity, bureau flags (thin file, defaults, score/band), corporate registration/audit flags, and hard blocks — so officers fix issues before committee waste.

Credit philosophy: AI-powered Credit Intelligence enforces standards and explains risk. Humans still decide. That is how you win both Risk and Business sponsors.

9. Module D — GPS Collateral & Evidence Packs

Problem solved: WhatsApp photo chaos, unclear site presence, disputed coverage, weak dual control.

9.1 Field visit with offline sync & map verification

- Building BOQ (construction catalog × woreda unit prices), land, other/movable
- GPS site mark with accuracy; EXIF vs live GPS mismatch warnings
- Min photos (e.g. 5 building / 3 land); photo distance policy (default 200m)
- Offline tablet PWA: prepare offline → capture → Sync now
- Lock after submit; supervised unlock; engineering QA pipeline

The screenshot displays the 'Field visit — Veronica' app interface. At the top, a dark green navigation bar contains icons for Home, Loan requests, Catalog, Unit prices, Collateral, Users, Districts, Branches, Area, and Settings. Below this, a green header bar shows the title 'Field visit — Veronica' and the identifier 'HK-000015919 · Aster Bekele Trading PLC'. A status bar indicates 'Online — field data syncs to the server.' with a red '0' icon, and buttons for 'Prepare offline' and 'Sync now'. A yellow banner states 'Collateral submitted — this visit is read-only.' Below this is a 4-step wizard: '1. Site & building' (active), '2. BOQ quantities', '3. Photos', and '4. Review'. The 'Step 1 — Site & building' section contains three input fields: 'Building name' (Veronica), 'Construction type' (Construction), and 'Floors'. Below the wizard is a 'Buildings' section with a 'Woreda (for unit prices)' dropdown menu showing 'Addis Ababa', and two more dropdowns for 'Zone' and 'City / Woreda'. A 'Building site GPS' section follows, with a note: 'Mark the registered collateral location on the map. Field photos will be compared to this'.

Figure 18 — Field visit: offline/sync bar, 4-step wizard (Site → BOQ → Photos → Review), GPS ($\pm 18\text{m}$), and map with field-site pin.

9.2 Collateral evidence pack for committee & audit

One dossier: coverage vs ask, policy checks, BOQ summary, GPS-tagged photos, map, and recent audit events — with Print/PDF, Export JSON, Export ZIP.

9.3 Policy configuration

Bank risk teams tune min photos, GPS accuracy thresholds, coverage minimums, and distance flags — without code changes.

Collateral field-work policy

Bank-wide thresholds for photos, GPS, coverage ratio, and submit rules. One configuration applies to all branches.

Min images per building:	5
Min images per land:	3
Min images per other item:	3
Gps accuracy weak threshold m:	100 Above this GPS accuracy (metres), officer attestation is required.
Photo max distance from site m:	200 Flag photos farther than this from registered site GPS.
Block submit on far photos:	☐ If enabled, photos beyond max distance block collateral submit.
Block submit on missing photo gps:	☐ If enabled, photos without GPS block collateral submit.
Min coverage ratio:	1.0000 Minimum collateral value ÷ loan amount (1.0 = 100%). Blocks submit if below.
Flag coverage below ratio:	1.0000 Advisory warning when coverage is below this ratio.
Declared address max distance from site m:	3000 Flag when geocoded declared address is farther than this from field site GPS.
Block submit on declared address mismatch:	☐ If enabled, large declared-address vs site GPS gap blocks collateral submit.
Require movable photo types:	☒ Require plate, full asset, and chassis/serial photos for vehicle/machinery items.
Exif gps mismatch warn m:	200 Warn when photo EXIF GPS differs from browser GPS by more than this (metres).
Block submit on exif gps mismatch:	☐ If enabled, large EXIF vs browser GPS mismatch blocks collateral submit.

Save policy

Cancel

Figure 20 — Collateral policy configuration (bank-tunable GPS and coverage rules).

Bank benefit: Committee-ready proof; dual control; rural-ready offline capture; reconstructable audit.

10. Module E — Approval Committee (live screenshots)

Problem solved: Incomplete packs, unclear routing, slow sequential sign-offs, and opaque returns. This section shows the *actual* committee workflow from the running system.

10.1 Officer submits to the approval committee

After Sheets 1–7 are finished, the loan officer submits the file to the configured Branch → District → Head Office → Management pathway, with optional notes for voters.

Proceed to collateral estimation

All required documents are authenticated. Use this when you are ready to start collateral estimation.

Collateral estimation

Collateral estimation: Submitted on 07/21/2026 12:32 p.m. by zemeo — locked for audit.
Estimated collateral value: **20900000.00** (immovable 20900000.00)
Coverage vs loan: **836.00%** — **advisory flags**

- [Veronica](#) — ready

[Collateral summary](#) | [Evidence pack](#) | [Dossier.JSON](#) | [Collateral dashboard](#)

Loan officer steps

Fill the cashflow-based MSME loan appraisal (Sheet 1–7), set the **recommended amount** on Sheet 6, then submit to the approval committee.

[Open loan appraisal](#) [View appraisal steps \(guide\)](#)

Appraisal finished 07/25/2026 9 a.m..

Approval committee

Status: Pending committee

Your recommended amount (Sheet 6): 2500000.00

Waiting at **Branch approval committee**.

Approval routing
Amount used for routing: **2500000.00** (Sheet 6 recommended)

Levels this loan will follow:

1. Branch approval committee
2. District approval committee
3. Head office approval committee
4. Management approval committee

Approval levels

1. **Branch approval committee** Current — Pending
Needs 2 approval(s) / 2 decline(s) · Votes: 0✓ / 0✗ (3 eligible voters) · zemeo, seqella, gebrelibanosmt
2. **District approval committee** — Pending
Needs 2 approval(s) / 2 decline(s) · Votes: 0✓ / 0✗ (26 eligible voters) · weldedawit, kibrom, meargaw, tesfayt, belay, welday2, hiruyaen, selomonyg, hagos, abraha, aster, gaday, ajeba, tsigeb, gezugm, mulugetahg, aberashbg, brhanu, aregawikt, seqella, tsegazeabkt, danielat, negasi, tesfay, mitkuth, gebrelibanosmt
3. **Head office approval committee** — Pending
Needs 2 approval(s) / 2 decline(s) · Votes: 0✓ / 0✗ (3 eligible voters) · Abrehaley, abel, mebraty
4. **Management approval committee** — Pending

Figure 21 — Officer loan detail: approval committee status after submission (pending at Branch approval committee), with routing visibility.

10.2 My approval queue — votes waiting for you

Committee members open a dedicated queue of loans requiring their vote at the current level — no chasing paper files across desks.

Figure 22 — Approval queue (“My votes”): Aster Bekele Trading PLC awaiting Branch approval committee action.

10.3 Cast your vote at the current level

Voters see overall status, current level, approval routing/pipeline, Sheet 6 recommendation summary, link to the full appraisal pack, and a vote form (Approve / Decline, amount supported, comments). They can also **return to loan officer** with required feedback.

10.4 One-screen committee appraisal pack

Before voting, members open a read-only pack covering Sheets 1–7 — scorecard, cashflow/DSCR, E&S, collateral coverage, strengths/weaknesses — Print/PDF ready.

Figure 24 — Read-only committee appraisal pack for Aster Bekele Trading PLC (MSME / cashflow mode).

10.5 Amount-routed levels (configurable per bank / MFI policy)

LEVEL	TYPICAL VOTERS	DEFAULT VOTES
Branch	Loan officer, branch manager, accountant	Min 2 approve / 2 decline
District	District manager + peers	2 / 2
Head office	Ops, finance, credit committee	2 / 2
Management	CEO / VP / board as configured	2 / 2

Outcomes: **Approve** · **Decline** · **Return to officer** with notes. Operations/finance queues provide pre-committee control when configured.

12. Modules F–J — Customer Channel, Intelligence & Post-Approval

Beyond digitizing DBE's seven sheets, the platform is a **full credit factory** that adopting banks and MFIs can configure — apply → assess → approve → close → disburse → monitor. DBE's cashflow methodology remains the underwriting core.

12.1 Module F — Digital Apply & online intake

Problem solved: Customers must visit a branch to start a file; officers re-key KYC; first packs arrive incomplete.

- **Customer portal** — Register with institution customer number, guided apply, document upload, fee payment (or waived), Queue ID, status notices
- **After approval** — Repayment schedule view; optional processing-fee collection on approved loans only
- **Staff online intake** — Digital Apply submissions land in an officer queue with auto-assign; same file continues into DBE-faithful appraisal

12.2 Module G — Post-approval, closing pack & Finance disbursement

Problem solved: Approval is not disbursement — conditions and legal collateral steps still live in paper.

- **Conditions checklist** — Clear post-approval conditions before release
- **Closing pack** — Collateral restriction, POA, title search, mortgage registration, notary/stamp verification gates
- **Digital agreement e-signatures** — Tablet signature pad with content-hash binding (borrower / officer / branch manager)
- **Schedule confirm → ready → disbursed** — Finance queue; optional CBS booking; partial disbursement where configured

12.3 Module H — Agentic Assist & Credit Intelligence

Agentic Assist (hard rails)

- Floating copilot + agent workspace
- Story/bootstrap loan draft, document checklist coach, read-only appraisal guidance
- Full run audit — **cannot** approve, submit committee, or disburse

Credit Intelligence

- Overview KPIs and officer/manager workspaces
- Portfolio & collateral analytics
- Scoped CI assistant Q&A — decision support, not auto-approve

12.4 Module I — Risk desk, MFA & staff delegations

- **Risk Desk** — Queues for weak score, E&S issues, thin coverage, low DSCR; optional block on committee submit until risk sign-off
- **MFA** — TOTP setup/verify, login lockout, security audit log export
- **Staff delegations** — Admin-approved, scoped cover without password sharing
- **On-prem license** — Ed25519 product license; no phone-home; institution-controlled deployment

12.5 Module J — Seqela Market & post-disbursement book ops

Seqela Market
Dealer and cooperative reporter portal — local price observations recomputed into area price bands for collateral and credit inputs.

Book operations
Monitoring, collections, covenant tracking, watchlist, arrears DPD, workout/reschedule, write-off — same dossier after disbursement.

Figure 26 — In-app notifications: queue events, committee actions, and customer-facing Digital Apply notices.

Figure 27 — Engineering QA pipeline — dual control before collateral values feed committee and closing pack.

Credit philosophy: AI accelerates staff work with hard rails — humans and committees still decide. DBE's cashflow standard stays sovereign. No auto-approve, no silent disburse.

13. Partnership Model with DBE

Seqela proposes DBE as the **methodology owner and sector champion**; Seqela as the **technology operator**; banks and MFIs as **adopting institutions**.

DBE role

- Endorse Excel-faithful digitization
- Co-brand / recommend to partner FIs
- Introduce via wholesale, lease, TA channels
- Guide policy thresholds & MSME priority sectors
- Optional: use platform internally

Seqela role

- Host / deploy / support the full credit factory
- Configure products, gates, hierarchy, Digital Apply, Market per FI
- Train credit, field, risk, and finance teams
- Integrate CBS customer prefill where available
- Maintain Excel-faithful methodology updates with DBE Credit

Bank / MFI role

- Adopt DBE-faithful appraisal + full factory modules
- Pilot selected branches / products (incl. Digital Apply if desired)
- Align committee, Risk Desk, and closing-pack thresholds
- Measure cycle time & portfolio quality KPIs
- Scale network-wide after pilot

Partnership mechanisms DBE can use

MECHANISM	HOW IT HELPS
Official recommendation	Letter / circular to banks & MFIs that the digital factory is the preferred implementation of the cashflow MSME workbook
Co-branded rollout	"DBE methodology · Seqela platform" for credibility and faster FI buy-in
Wholesale / on-lending conditionality	Where appropriate, encourage partner FIs to use standard digital appraisal for MSME lines
Technical assistance bundling	Include configuration & training in MSME capacity programs DBE already leads or co-leads
Affordability facility	Volume pricing, shared instance tiers, or donor/TA co-funding so MFIs are not priced out

Important: This is not a request for DBE to abandon its systems. It is a request to industrialize the methodology DBE already gave the sector.

14. Affordability Path for Banks & MFIs

The Excel was shared to raise standards. Software must not recreate a new exclusion — where only large banks can digitize.

Design principles

- One core product — configure, don't rebuild
- Tiered packages by FI size (MFI / mid bank / large bank)
- Shared cloud or private deploy options
- Pilot-first commercials (fixed scope)
- Training included in implementation

How DBE makes it affordable

- Volume commitment across FI cohort → lower unit price
- Co-fund TA / training from development programs
- Prefer shared multi-tenant for small MFIs
- Phased modules (appraisal-first → collateral/committee → Digital Apply / post-approval)
- Transparent SLA & support for rural branches

Illustrative adoption path (to be agreed)

TIER	TYPICAL INSTITUTION	ENTRY MODEL
A	Small / mid MFI	Shared instance · appraisal + documents · capped users
B	Large MFI / mid bank	Dedicated instance · full modules · CBS prefill
C	Large bank / DBE optional	Private deploy · SSO / deeper integration · custom policy packs

Detailed commercials are issued after discovery confirms cohort size, hosting model, and DBE's preferred partnership instrument.

15. Reference Case — DECSI

Designed around Dedebit Credit and Savings Institution (DECSI) practices — branch → district → HO, construction-based building valuation, and cashflow MSME appraisal aligned to the same Excel-faithful sheets.

53,901 Applications processed	ETB 17.03B Amount approved	ETB 13B+ Actually disbursed	25,397 Customers approved
---	--------------------------------------	---------------------------------------	-------------------------------------

Full lending lifecycle (applications → approval → rejection → disbursement): ETB 29.56B requested · 1,762 customers rejected (ETB 1.37B) · ~76% of approved amount subsequently disbursed · amount approval rate 57.59% · customer approval rate 47.12%.

Expected operational benefits: 50–70% wait-time reduction, weeks-to-days multi-level approvals, 95%+ document completeness.

Reference: Tsige Bayray, Vice Chief of IT, DECSI · +251 914 701 978.

Relevance to DBE: Proof that an Ethiopian MFI can run the digitized cashflow methodology in production — the same path proposed for other MFIs and banks under a DBE-backed rollout.

16. Implementation & Sector Rollout Roadmap

Per-institution speed: once a participating bank or MFI delivers its requirements, pilot go-live is about **one month**. Sector-wide rollout phases below can run in parallel across FIs.

PHASE	TIMING	FOCUS
Partnership kickoff with DBE	Week 1	Confirm Excel sheet mapping, policy gates, FI cohort shortlist, affordability instrument, KPIs
Reference template	Weeks 1–3	DBE-endorsed configuration; branding options; training curriculum
First FI pilot(s)	~1 month after each FI's requirements	2–4 banks/MFIs live as requirements arrive; parallel-run vs Excel; KPI dashboard
Scale	Ongoing	Expand FI network; optional DBE internal use; continuous methodology updates with DBE Credit

Pilot success metrics (agreed upfront): cycle time vs Excel baseline, sheet completeness %, committee return rate, DSCR gate adherence, audit retrieval time, FI satisfaction.

17. Next Steps & Decision Request

1. 90-minute live demonstration for DBE Credit, MSME/Lease, IT, and Partnerships — walk the DBE sheets in the live system
2. Joint discovery workshop: Excel → digital field mapping + affordability options
3. Select pilot FI cohort (mix of bank + MFI)
4. Issue partnership SOW / MoU draft and commercial framework for the cohort

Decide this week: Book the demo → name DBE sponsors → shortlist 2–4 pilot FIs → agree affordability principle.

Seqela · info@seqela.com · +251 964 790 724 · seqela.com

18. Closing

DBE already did the hardest intellectual work: defining a cashflow-based MSME appraisal standard and sharing it with the sector. Seqela has done the next step: turning that standard into a governed digital credit factory — from Digital Apply through 7-step appraisal, GPS collateral, committees, closing pack, and Finance disbursement — that officers can use every day.

The Excel showed the method.

The platform makes the method inevitable — and affordable to scale.

We ask DBE to help us push this to banks and microfinance institutions — and to structure adoption so it remains affordable for the institutions that need it most.

Appendix A — Screenshot Index
