

Next-Generation Digital Loan Origination & Processing System(Automation)

By Seqela Technologies PLC

May 25, 2026

I. Executive Summary

This proposal presents a **Next-Generation Digital Loan Origination & Processing System (LOS)** for **Global Bank Ethiopia**, designed to automate, streamline, and intelligently manage the complete loan lifecycle — from digital application and queue management to collateral valuation, multi-level authorization, and core banking disbursement.

The proposed solution is an enterprise-grade, AI-enabled platform that will:

- Digitize loan applications (Retail, SME, Corporate, Agricultural, Mortgage)
- Implement smart queue and workflow management
- Automate document verification with AI/OCR
- Integrate collateral GPS & valuation engine
- Enable multi-tier approval hierarchy
- Seamlessly integrate with Global Bank Ethiopia's Core Banking System
- Provide advanced analytics & compliance reporting

The system will significantly reduce loan turnaround time, strengthen risk management, enhance regulatory compliance, and improve customer experience.

II. Background & Strategic Need

As one of Ethiopia's leading private banks, **Global Bank Ethiopia** requires:

- Faster loan processing
- Stronger risk governance
- Digital customer onboarding
- Reduced operational bottlenecks
- Full compliance with directives of the National Bank of Ethiopia

Current banking challenges typically include:

- Manual or semi-digital loan workflows
- Incomplete document submissions
- Approval bottlenecks across branch, district, and head office
- Delays in collateral verification
- Limited real-time monitoring of loan pipelines

This proposal addresses these challenges with a fully integrated, scalable, secure digital solution.

III. Proposed Solution Overview

Oromia Digital Loan Management Platform (WLMP)

An enterprise cloud-ready Loan Origination System (LOS) covering:

1. Digital Loan Application
2. Intelligent Document Management
3. Smart Queue Management
4. Collateral GPS & Valuation Engine
5. AI-Based Credit Scoring
6. Multi-Level Authorization Workflow
7. Legal & Compliance Controls
8. Automated Disbursement
9. Advanced Reporting & BI
10. Security & Fraud Detection

IV. Key Features & Functional Modules

1. Digital Loan Application Portal

- Web & mobile-based application
- Product selection (Retail, SME, Corporate, Mortgage, Agricultural)
- Pre-eligibility assessment
- Instant application reference number
- Integration with national ID / KYC systems
- Customer dashboard for status tracking

2. Intelligent Document Fulfillment Module

- Loan-type based checklist wizard
- OCR-based document validation
- AI-driven fraud detection
- Automated KYC / AML screening
- Secure digital document vault
- Group/corporate multi-user upload support

Benefits:

Seqela Technologies PLC

- Reduces incomplete submissions
- Speeds verification
- Improves compliance

3. Smart Digital Queue Management

- Virtual queue system per branch
- Real-time queue dashboard
- SMS/email notifications
- Estimated waiting time display
- Priority routing for VIP / corporate clients
- Integration with core banking for pre-screening

Branch managers can:

- Monitor pipeline
- Adjust queue priority
- Export queue reports
- Track daily performance

4. Collateral GPS Integration Module

- GPS coordinate capture via mobile app
- Geo-tagged property documentation
- Map visualization of assets
- Field officer verification tracking
- Integration with land registry databases (where applicable)

5. AI-Based Collateral Valuation Engine

- Automated market-based valuation models
- Comparable sales analysis
- Depreciation engine for machinery/vehicles
- Agricultural commodity value reference
- Risk-adjusted collateral coverage ratio
- Manual override with audit trail

System generates:

Seqela Technologies PLC

- Loan-to-Value (LTV) ratio
- Risk flags for under-collateralization
- Escalation triggers

6. Multi-Level Authorization Workflow

Designed to align with Global Bank Ethiopia's hierarchical structure:

Level 1 – Branch Level

- Initial document & financial review
- Preliminary credit scoring
- Approval within branch limit

Level 2 – District/Regional Office

- Review mid-level risk or higher amount loans
- Validate collateral valuation
- Risk-based escalation rules

Level 3 – Credit Department (Head Office)

- Portfolio risk analysis
- Compliance checks
- High-value approvals

Level 4 – Executive Management

- Exceptional or strategic approvals
- Large corporate facilities

Features:

- Configurable approval thresholds
- Escalation timers
- Full audit logs
- Digital signatures
- SLA monitoring

7. Legal & Compliance Control Module

- Collateral legal status verification
- Restriction flagging (court cases, encumbrances)
- Automated compliance checklist
- NBE reporting compliance
- Regulatory audit export

8. AI Credit Scoring & Risk Engine

- Historical repayment analysis
- Behavioral scoring
- SME financial analysis automation
- Portfolio exposure monitoring
- Early warning system (EWS)

9. Processing & Disbursement Integration

Upon final approval:

- Auto-generate loan agreement
- E-signature support
- Seamless integration with core banking
- Automated disbursement to:
 - Bank account
 - Mobile wallet
 - Third-party beneficiary

10. Reporting & Business Intelligence

Dashboards include:

- Loan pipeline tracking
- Branch performance comparison
- Approval time per level
- Collateral coverage analysis
- Default prediction insights
- Regulatory compliance reports

Seqela Technologies PLC

Export formats:

- Excel
- PDF
- API integration

11. Security & Compliance

- Role-Based Access Control (RBAC)
- Multi-Factor Authentication (MFA)
- Data encryption (at rest & in transit)
- Fraud analytics engine
- Activity logging & monitoring
- Compliance with NBE cybersecurity directives

V. Technical Architecture

Frontend:

- React / Angular (Web)
- Flutter (Mobile)

Backend:

- Django / Python (Enterprise-grade backend)
- RESTful APIs
- AI/ML integration

Database:

- PostgreSQL / Enterprise SQL
- Encrypted storage

Deployment:

- Private Cloud / Hybrid Cloud
- On-premise option
- High-availability cluster
- Disaster Recovery site

VI. Implementation Plan

Phase	Duration
Discovery & Requirement Alignment	1 week
System Design & Architecture	1 week
Development	3 weeks
Integration & Testing	1 week
Deployment & Training	1 Month
Total Estimated Timeline: 1–2 Months	

VII. Estimated Budget

Component	Estimated Cost (ETB)
Discovery & Design	—
Development	—
Integration & Testing	—
Deployment & Training	—
Infrastructure & Hosting	—
Support (Year 1)	—
Total Estimated Investment	To Be Determined

(Final costing subject to detailed scoping with Global Bank Ethiopia IT & Risk teams.)

VIII. Strategic Benefits for Global Bank Ethiopia

- 50–70% Reduction in Loan Processing Time
- Increased customer satisfaction
- Stronger risk governance
- Improved compliance posture
- Better portfolio quality
- Data-driven executive decisions
- Competitive digital advantage in Ethiopian banking sector

Seqela Technologies PLC

Expected ROI: 12–18 months

IX. Conclusion

This proposal positions **Global Bank Ethiopia** to become a leader in digital credit operations in Ethiopia through a fully automated, AI-enhanced Loan Origination & Processing System.

By implementing this platform, Global Bank Ethiopia will:

- Modernize its credit infrastructure
- Strengthen regulatory compliance
- Improve operational efficiency
- Enhance customer experience
- Drive sustainable growth
