

CANVAS EXPORT

System flow assessment

Product completeness of DECSI Loan Hub against the 12-stage diagram in presentation/system_flow.png. Code and automated-test review — not a live production UAT at DECSI.

91.8% flow completeness

Mean of 12 stage scores (0–100). 1,101 / 1,200 completeness points (was 91.2% / 1,094 on 21 Aug).

10 / 12 fully implemented

Application through appraisal, authorization, workflow, analytics, and fraud/AML desk.

1 config · 1 partial

Disbursement mock until CBS. Legal admin still partial. Fraud/AML case engine is now in product.

282 / 282 tests

Clean gate on 24 Aug 2026 re-run. docker compose exec web python manage.py test

CLASSIFICATION
Seqela internal — do not send as-is

1. Overall

The credit factory is built. Weighted completeness is 91.8% across the 12 flowchart boxes (was 91.2% on 21 Aug). Ten stages are fully implemented in product code, including a Fraud/AML case desk that can block committee and disbursement. Disbursement to core banking is coded, with a Finance CBS payload preview, but still mock-by-default until DECSI_BASE_URL is set. One box stays partial: standalone legal administration.

Count of flowchart boxes · n = 12 · Source: code review 24 Aug 2026.

Completeness by stage (%)

Score 0–100 per flowchart box · mean 91.8%. Gold = partial · blue = config. Re-assessed 24 Aug 2026.

2. Stage-by-stage result

Scores are reviewer estimates of flowchart intent vs shipped code, not production KPIs.

#	FLOWCHART BOX	VERDICT	SCORE	WHAT THE PRODUCT DOES	EVIDENCE	GAP
1	Application Applying for loan; getting information	FULLY IMPLEMENTED	96	Staff create plus Digital Apply. Mock vs live source labelled; silent mock refused when live CBS URL is set; Chapa callback gated to public HTTPS	profile_data_source; callback_url_is_public_https; email_health	CBS customer lookup still uses demo mock when DECSI_BASE_URL is unset
2	Documents Necessary documents; get approval	FULLY IMPLEMENTED	96	Per-loan-type checklist, Eng+Amh OCR, integrity/identity checks, officer verify/reject, default extraction maps that fill appraisal Sheet 1	document_auth.py; document_extraction_defaults.py; sync_sheet1_from_documents	LLM and external ID checks are optional hooks, not always on
3	Loan Queue No Generation	FULLY IMPLEMENTED	100	HK-##### issued on staff, online, agent, and CSV create	generate_incremental_loan_request_id(); LatestLoanRequestID	No separate ticket-printer app — the queue number is loan_request_id
4	GPS Collateral integration; data capture	FULLY IMPLEMENTED	92	Field visits for building/land/other: site GPS, photo EXIF, maps, offline tablet sync, evidence pack	collateral/views field_visit; site_gps_lat/lon; /collateral/loan/<id>/...	Gebeta tiles need an API key; OSM fallback works without it
5	Collateral Estimation Estimation detail; estimated amount	FULLY IMPLEMENTED	98	BOQ catalog, unit prices, building/land/movable valuation, engineering QA, grand total into appraisal Sheet 5	BuildingValuation, LandValuation, compute_collateral_totals; /collateral/engineering-qa/	None material
6	Loan Appraisal Financial, business, approval	FULLY IMPLEMENTED	98	7-step MSME and corporate wizard. Sheet 1 labelled Mock vs Live and prefilled from documents	APPRAISAL_STEPS; apply_document_extractions; loan_appraisal_step1.html	Sheet 7 (repayment schedule) is optional by design

#	FLOWCHART BOX	VERDICT	SCORE	WHAT THE PRODUCT DOES	EVIDENCE	GAP
7	Authorization Branch / zonal / HO operation / HO mgt	FULLY IMPLEMENTED	93	Configurable committees: branch → district → head_office → management, amount bands, votes, delegations	ApprovalCommitteeLevel keys; loans/committee.py; /hub/manage_approval_committees/	Flowchart “Zonal” is District; “HO Operation” is head_office (Cooperative intake is a separate gate)
8	Prohibition of collateral in legal administration	PARTIALLY IMPLEMENTED	68	Post-approval legal papers that block disbursement: restriction, POA, title search, mortgage, notary	loans/collateral_legal.py; /hub/loan_request/<id>/post_approval/	No Legal role, legal queue, or legal_cleared stage — enforced as a finance gate, not its own module
9	Processing Workflow Status tracking; integration & verification	FULLY IMPLEMENTED	95	Role queues, committee status, document verify, process policy, risk desk, notifications, remote SMS OTP agreement signing, delegation document access	remote_sign.py; /sign/agreement/<token>; StaffDelegation	Workflow is Django state machines, not a BPMN engine
10	Disbursement Disbursing to core banking	CODE COMPLETE, LIVE CBS PENDING	85	Post-approval → Finance → confirm → book. Finance sees CBS payload preview and a customer-number gate. Live Temenos client exists; mock ledger is still the default	finance_ready_to_book; cbs_client.build_disbursement_payload	Live booking needs DECSI_BASE_URL; DECSI_CBS_USE MOCK_LEDGER defaults to True
11	Report & Analytics	FULLY IMPLEMENTED	90	Classic reports plus Credit Intelligence (pipeline, collateral, decision, assistant) and book-ops desks	/hub/credit-intelligence; reporting.py; views_book.py	NPL / outstanding KPIs stay adapter-backed and weak until live CBS

#	FLOWCHART BOX	VERDICT	SCORE	WHAT THE PRODUCT DOES	EVIDENCE	GAP
12	Security and Compliance RBAC; authorization; fraud detection	FULLY IMPLEMENTED	90	20+ roles, MFA, lockout, audit, committee bands, plus Fraud/AML case engine: auto-open from documents and banking anomalies, investigation desk, committee and disbursement gates	loans/compliance/case_engine.py; ComplianceCase; /hub/compliance/	Origination AML, not live CBS transaction streaming or regulatory SAR/goAML filing

3. Flowchart labels vs product names

Authorization titles in the diagram do not match the committee keys in code. Functionally the four-level chain is there.

SYSTEM_FLOW.PNG	PRODUCT IMPLEMENTATION	MATCH
Branch (S/branch) Level	ApprovalCommitteeLevel key = branch (sub-branch via Branch)	Direct
Zonal Level	key = district (District Manager / district committee)	Renamed
HO Operation Level	key = head_office committee; Cooperative intake is a separate queue	Split
HO Mgt Level	key = management (CEO / VP / Board)	Direct
Prohibition of collateral in legal administration	Post-approval legal documents + disbursement blockers	Relocated
Disbursing to Core Banking system	cbs_client + Finance gate; mock ledger unless DECSI_BASE_URL	Config
Fraud Detection	Fraud/AML case desk + document/banking auto-open + origination/disbursement gates	Direct (origination scope)

4. Gaps that keep the flow from 100%

8. Legal administration is a finance gate, not a module · 68%

The diagram places prohibition of collateral after authorization as its own step. The product stores restriction, power of attorney, title search, mortgage registration, and notary papers on the post-approval screen and blocks mark-disbursed until they are verified. There is no lawyer role, legal queue, or legal_cleared status. Closing the gap means a Legal Administration queue between committee_approved and Finance.

12. Fraud/AML is origination monitoring, not goAML · 90%

A dedicated Fraud & AML desk now opens investigation cases from duplicate/suspicious documents and banking-history anomaly scores. Open cases can block committee submit and disbursement. Residual gap vs a bank AML product: no live CBS transaction stream, no device/velocity engine, and no regulatory SAR/goAML filing.

10. Core banking disbursement is mock until DECSI_BASE_URL · 85%

The path post-approval → Finance approval → officer confirm → CBS book is fully coded (finance_ready_to_book, cbs_client.py, tests). Finance now sees a CBS payload preview and is blocked without a customer number. Default settings use DECSI_CBS_USE MOCK_LEDGER=True. Live Temenos booking requires DECSI_BASE_URL. Customer lookup refuses silent mock when a live URL is set.

Adjacent: Seqela Market staff admin is unwired · portal only

The external market portal at /market-portal/ is live. Staff market admin views exist under partners/ but are not mounted in the root URL conf (tests expect /partners/ to 404). This is outside the 12 boxes but is part of the surrounding product.

5. Automated test run

Clean gate: 282 / 282 passed. Re-run in the web container on 24 Aug 2026 after the Fraud/AML case engine (auto-open, desk, origination and disbursement gates). Suite grew from 276 to 282.

Duration

WHAT CHANGED SINCE 21 AUG	EFFECT ON THIS ASSESSMENT
Fraud/AML case engine: desk, auto-open from documents and banking anomalies, committee and disbursement blockers	Stage 12 83 partial → 90 full. Only legal administration remains partial.
New tests: loans.tests.test_compliance_fraud_engine	Suite 276 → 282, all passing
Legal administration and live CBS booking unchanged	Stage 8 still 68%; stage 10 still mock-by-default (85%)

Pass rate 100% (282/282) · docker compose exec web python manage.py test

6. Closing the flowchart

1. Add a Legal Administration queue and role so stage 8 sits between committee approval and Finance, matching the diagram.
2. Point DECSI_BASE_URL at core banking and turn off mock ledger in the target environment so stage 10 is a live disbursement.
3. Fraud/AML desk is in place for origination. If DECSI needs live CBS transaction monitoring or regulatory SAR/goAML filing, specify that as a scoped addition.
4. Automated tests are a clean gate (282/282). Remaining work is the legal desk (process design) and CBS go-live, not test repair.

Not scored here: DECSI production currently runs queue and admin only; this assessment is of the enhanced credit-factory codebase against system_flow.png.
