

CONFIDENTIAL PROPOSAL PREPARED FOR

Development Bank of Ethiopia

DBE iBOC

Integrated Back Office Automation & Credit Intelligence — one credit lifecycle, seven financing product engines, Credit Intelligence as the decision layer. Core banking stays DBE's.

Extend, don't rebuild

Live at DECSI

Project · Lease · Wholesale

IFB · Idea · External fund

Powered by Seqela AI Credit Intelligence

Presented by Seqela · September 2026

THE DECISION IN ONE SLIDE

What We Are Asking DBE To Decide

Deploy iBOC as DBE's credit back-office system of record — not another origination app.

OUTCOME 1**One lifecycle for every product**

Sourcing → KYC → appraisal → review → approval → contract → disbursement → implementation → monitoring → collection → rehab → write-off.

OUTCOME 2**Seven product engines, not seven systems**

Project, lease, wholesale, consumer, Murabaha, Ijarah, idea/equity, plus donor fund windows — on the same spine.

OUTCOME 3**How a DFI actually releases money**

Equity before loan, purpose-coded drawdowns after site proof, family-matched collateral, named rehab before foreclosure.

7+

Financing engines

12

Credit-book stages

45-day

Origination SLA clock

DECSI

Live factory we extend

Agenda

- 01** Why a development bank needs more than MSME Excel

- 02** Architecture: shared spine + product engines + desks

- 03** Seven financing products — what each engine does

- 04** Credit Intelligence stays the brain (live at DECSI)

- 05** Family → appraisal, collateral, KYC, rehab

- 06** Proof, business case, implementation path

STRATEGIC FIT

Why This Matters for DBE Now

DBE is a policy development bank. The credit factory that works for an MFI cashflow book must grow into *project viability, lease assets the bank owns, PFI wholesale, donor covenants, and IFB*.

DFI, not retail MSME only

Priority sectors, debt–equity bands, tenor to 20 years, grace covering implementation — policy that must be gates, not memos.

World Bank FSSP / NPL reform

Governance, risk, and MIS for a sound DFI. iBOC is the credit case, conditions, and rehabilitation file — CBS still posts money.

Donor & PFI books

KfW/EU 218.26, RUFIP, SMEFP already demand utilization, women/youth cuts, PAR, and a reconstructable MIS — not Excel.

Seqela will extend the AI-Powered Credit Intelligence platform already live at DECSI into an enterprise Integrated Back Office Automation and Credit Management System for DBE.

Extend the Live Factory — Do Not Rebuild

DECSI stays AI-Powered Credit Intelligence. DBE iBOC is the same platform with DFI engines and desks.

Already live at DECSI

- Documents / OCR English + Amharic
- 7-step MSME and corporate appraisal
- GPS collateral, BOQ, field visit, engineering QA
- Multi-level committees, MFA, delegations
- Digital Apply, Assist, Credit Intelligence
- Post-approval → Finance disbursement

What iBOC adds for DBE

- Product families + dedicated engines
- CRM, Appraisal, Engineering, Legal, Scan desks
- Project: NPV/IRR, equity, plant, tranche unlock
- Lease/Ijarah asset register (bank title)
- Wholesale PFI file + donor fund covenants
- Rehab path + 45-day origination SLA

53,901 files · ETB 17.03B approved · ETB 13B+ disbursed at DECSI. Same operational DNA — configured for a development bank.

How a Development Bank Actually Releases Money

A generic loan-origination system

- One borrower, one loan, one disbursement
- MSME cashflow wizard for every product
- Collateral = land or building the customer already owns
- “Finance clicks book” after committee
- Collections as an afterthought

Wrong model for DBE

iBOC — encoded DBE credit policy

- Equity contribution first; staggered 1/3–2/3–100% on large files
- Purpose-coded draws: civil, machinery, WC, insurance
- Next tranche only after utilization proof + site visit
- Lease: bank owns the machine until the last installment
- Named Project Rehabilitation before foreclosure

This is the product

How iBOC Solves DBE’s Exact Pain Points

Problem → Platform response → Bank benefit

One Excel / MSME wizard for every product
Product family selects the engine: project desk, lease register, PFI file, Murabaha, idea — sheets only where they belong
Right appraisal, every file
~45 days to first disbursement on industrial files
Named desks + 45-day SLA clock: screening, technical, appraisal, review, committee, legal, first release
President-level KPI
Equity and drawdowns live in paper
Debt-equity gates, current-account / equity rules, purpose-coded tranches unlocked by implementation visits
Policy as software
Lease treated as ordinary collateral
Financed-asset kind: supplier, serial, bank title, insurance — not the customer’s existing land
True hire-purchase
Donor / PFI reporting in spreadsheets
Funding windows (218.26, RUFIP, SMEFP) with envelope, women/youth, PAR covenants on every tagged file
Donor-ready MIS

Architecture — One Spine, Product Engines Plugged In

[Customer & KYC →](#)[Credit Intelligence →](#)[Product engines →](#)[Committees →](#)[Legal & contract →](#)[Disbursement →](#)[Implementation →](#)[Rehab](#)

01 Shared credit lifecycle

Application → KYC → appraisal slot → review → committee → contract → disbursement → monitor → collect → recover. Do not fork seven banks.

02 Product family on the loan type

Selecting the category selects the engine, appraisal method, allowed collateral, and intake desk — automatically.

03 Credit Intelligence as the brain

MSME/corporate 7-sheet wizard, GPS, scorecard, Assist, committees — live at DECSI; still used for working-capital and general files.

04 Desks, not extra user roles

Job stays officer / VP / board. Desk is CRM, Appraisal, Engineering, Legal, Scan, External Fund, Ongoing Concern.

05 CBS remains the book

Hub owns the case, conditions, visits, and recommendation. Core banking posts disbursement, repayments, and write-off accounting.

The 12-Stage Credit Book — Every Product Uses It

DBE's own lifecycle. Product-specific work happens inside the appraisal, security, and drawdown slots.

01

Customer sourcing

Walk-in, Digital Apply, CRM pipeline.

02

Application, screening, KYC

Scan/Admin + CRM, Engineering, Legal in parallel.

03

Appraisal

Engine for that family — not one Excel for all.

04

Loan review

Risk / review committee vs policy.

05

Approval

Amount-banded multi-level committees.

06

Contract & registration

Legal desk, mortgage, e-sign, conditions.

07

Equity release / disbursement

Seven Financing Engines — Already on the Platform

PROJECT

Project financing

Sources & uses, NPV/IRR, 75:25 / 50:50, civil/mech/electrical desks, visit-gated tranches.

LEASE

Lease / hire-purchase

New capital goods, supplier, serial, $\geq 20\%$ contribution, bank owns until paid.

WHOLESALE

Wholesale / PFI

Institution file: capital, NPL/PAR, governance, on-lending — not “can this person repay?”

IFB

Murabaha

Cost-plus, financed goods, Sharia trail — not interest amortization with the label peeled off.

IFB

Ijarah

Shares the lease asset engine; rental math and Sharia board log.

IDEA

Idea / quasi-equity

Promoter file, stake with DBE, no installment table. Start-up gates, not Sheet 7.

FUND

External fund windows

Donor line, envelope, women/youth/climate covenants on any family that is tagged.

PRODUCT DESK

Project Financing — The DFI Core

FILE**Project profile**

Title, cost, promoter equity, sources & uses that must balance before committee.

POLICY**Debt–equity & tenor**

75:25 domestic, 50:50 FDI/park, grace up to 5 years, envelope up to 20 years — illegal ratios fail before vote.

VIABILITY**NPV · IRR · DSCR**

Project metrics on the pack, not MSME monthly cashflow forced onto a plant.

PLANT**Technical desks**

Civil, mechanical, electrical as named queues on the investment — engineering for the plant, not only collateral BOQ.

SECURITY**Site + financed plant**

Land/building and/or machinery this loan will buy. Mix is per file.

DRAWS**Visit unlocks the next tranche**

Purpose: civil / machinery / WC / insurance. Last draw must be evidenced before the next release.

Lease and Ijarah Share the Asset — Not the Contract Math

Conventional lease (hire-purchase)

- New capital goods only
- Supplier, serial, commissioning
- Lessee contribution (policy $\geq 20\%$)
- Ancillary (insurance, transport, install) capped
- Bank holds title until last installment
- GPS on the asset location

Ijarah (TA'AWUN)

- Same asset / supplier register
- Rental, not interest schedule
- Sharia board review log
- Bank as lessor until transfer
- Insurance with DBE as co-beneficiary
- SME Ijarah at branches; Murabaha projects at IFB / HO

Murabaha is a separate engine: cost-plus on financed goods. IFB is not a conventional loan with the interest label removed.

Wholesale and External Fund Are Two Different Questions

WHOLESALE ENGINE

Can this PFI manage and repay a facility?

Institution profile, capital, liquidity, NPL/PAR, governance, existing DBE exposure, on-lending strategy, sector/geo limits. No physical collateral — the book is the security.

FUND OVERLAY

Which donor line, and are covenants held?

KfW/EU 218.26, RUFIP III, SMEFP as funding windows. Envelope, 4.5% / $\leq 11\%$, 30% women / 20% youth, PAR90, eligible regions — tagged on any product family.

SMEFP already splits lease retail vs WC wholesale. Pretending they are one object would fail donor audit.

Idea, Murabaha, Consumer — Not Forced Into Sheet 7

IDEA / QUASI-EQUITY

Stake, not installment

Promoter file, start-up ≤ 5 years, implement in Ethiopia, IP / MoLS / start-up label gates, DBE share %. Same spine until approval, then investment monitoring.

MURABAHA

Cost-plus on goods

Financed movable / goods as security. Markup disclosed. Sharia trail. Export Murabaha at a lower markup when policy says so.

CONSUMER

Confirm the book with Credit

Housing / vehicle in DBE's process note. Likely developer/housing-supply, not retail mortgages. Engine exists; Wave 1 only if Credit confirms volume.

Credit Intelligence Remains the Brain

We did not throw away the 7-step factory. It is the appraisal slot for general / MSME / corporate and for fund-window files until Credit gives that window its own pack.

Sheet 1

CBS / OCR provenance. Gender & age for 30% / 20% reporting.

Sheet 2

Character / governance. Pass gate $\geq 75\%$.

Sheet 3

Cashflow, DSCR, stress, capacity vs ask.

Sheet 4

E&S 21 items. PASS / ACTIONS / REJECT.

Sheet 5

Collateral worksheet from GPS field.

Sheet 6

Explainable scorecard + recommendation.

Sheet 7

Amortization for conventional books.

Assist

Hard rails: cannot approve or disburse.

Product Family Selects Appraisal and Collateral

Officers do not pick a mismatched pack. Categories without security are allowed — wholesale and idea have none.

FAMILY	APPRAISAL	SECURITY THE FILE MAY USE
General	Officer chooses MSME or corporate sheets	Building, land, movable, mixed
Project	Project desk (NPV, equity, plant)	Site and/or plant financed by this loan
Lease / Ijarah	Asset register — not Sheet 3	The machine/vehicle this loan buys (bank title)
Wholesale	PFI institution file	None required
Murabaha	Cost-plus desk	Financed goods / movable
Idea / equity	Investment desk	None — stake, not pledge
Consumer	Sheets until a retail pack exists	Building and/or financed vehicle

DBE Desks — Work Units, Not Extra Job Titles

A user is job + desk + place. Files route by product family to the owning desk. DECSI departments stay valid.

CRM

Originates project, lease, IFB, idea. Owns monitoring after booking.

Appraisal Directorate

Credit assessment on the family engine.

Engineering

Plant technical + GPS/BOQ QA. Parallel KYC on DBE files.

Legal Affairs

Pack, contract, registration. Parallel KYC.

Scan / Admin

Online apply landing; document intake.

External Fund & Wholesale

PFI facilities and donor windows.

HRM

Consumer intake where that book exists.

Ongoing Concern

Acquired assets and foreclosure last.

Documents That Defend the Bank — KYC on DBE Desks

INTAKE

Party follows the family

Person, promoter, or PFI institution on the same registration form. DECSI keeps CBS customer lookup.

AUTHENTICATION

OCR English + Amharic

Identity match on name / phone / TIN. Pending → Auto-passed → Review → Verified / Rejected.

DBE KYC

Three desks in parallel

CRM, Engineering, Legal clear their slice. Scan/Admin queues Digital Apply. General files keep the existing auth path.

Eng + አማ

Bilingual OCR

3 desks

Parallel KYC

Per type

Document packs

95%+

Completeness goal

GPS Collateral — Including Assets This Loan Will Buy

What committees already trust (DECSI)

- Building BOQ × worded unit prices
- Land size × price; movable / machinery already owned
- GPS accuracy, EXIF vs live location, min photos
- Offline tablet sync; lock after submit; engineering QA
- Evidence pack: map, photos, coverage, audit log

What DBE files add

- **Financed**
kind — plant or vehicle purchased with this loan
- Bank title, not a pledged used machine
- Lease/Ijarah restricted to that kind
- Project may mix site + financed plant
- Wholesale / idea: no physical security required

Committees Decide. Core Banking Keeps the Book.

REVIEW & APPROVAL

Amount-routed votes

Branch → District → HO → Management. Return-to-officer with notes. Risk desk can block weak files.

LEGAL

Contract & registration

Restriction, POA, title, mortgage, notary, e-sign. Conditions precedent on the same dossier.

FINANCE

Handoff, not replacement

Tranches, partial release, optional CBS booking. iBOC never silently disburses.

Hub = credit case + policy + intelligence. CBS = money. That line does not move.

After Booking — Implementation, Rehab, 45-Day SLA

IMPLEMENTATION

Progress vs drawdown

Site visits after disbursement. % complete. Next purpose-coded tranche unlocks only when the visit clears.

REHAB

Named like DBE

Watchlist → restructure → technical assistance → recover → foreclosure last. Appeals up to President / Board.

SLA

~45 days to first release

Clock on screening, technical, appraisal, review, committee, legal, first equity/loan release. Informational KPI — not a fake committee gate.

Follow-up frequency and implementation delay are proven drivers of poor recovery. Post-disbursement is the DFI product, not a module to skip.

Proven at Scale — DECSI Reference

Dedebit Credit and Savings Institution · Mekelle · Branch → District → HO · AI-Powered Credit Intelligence in production

Full lifecycle: ETB 29.56B requested · 1,762 customers rejected (ETB 1.37B) · ~76% of approved amount disbursed

Reference: Tsige Bayray, Vice Chief of IT, DECSI · +251 914 701 978

Business Case — Why Leadership Says Yes

Cycle time & control

- Compress industrial files toward the 45-day first-release target
- Illegal debt–equity / tenor / lease contribution fail before committee
- One reconstructable dossier for NBE, donors, and internal audit

Portfolio & recovery

- Implementation visits tied to money — fewer stalled plants
- Rehab path before foreclosure, named as DBE already works
- PFI and donor books visible: utilization, women/youth, PAR

Strategic

- FSSP / DFI reform: MIS and credit process, not another LOS
- Same factory later available to PFIs on wholesale lines
- DBE methodology (cashflow sheets) preserved where it belongs

Risk of waiting

- Project files stay in Excel while policy lives in PDFs
- Donor MIS stays a reporting scramble
- Build-from-scratch is 12–24 months to parity with a live factory

Implementation — Configure DBE on a Working Platform

Product engines, desks, family–collateral matching, KYC, rehab, and fund windows are already prototyped on the live factory. The work is policy, data, and go–live — not a greenfield build.

ALREADY BUILT

iBOC overlay

Families, engines, desks, project/lease/wholesale/IFB/idea, funds, rehab SLA, financed collateral.

WEEKS 1–3

DBE configuration

Committees, document packs, debt–equity bands, fund windows, branding, CBS customer API.

~MONTH 1

Pilot go–live

Selected products (project + one other) and desks; training; hypercare; SLA baseline.

MONTHS 2–4

Scale the book

Remaining engines, PFI/donor MIS, optional PFI cohort on wholesale lines.

Hosting

On–prem or private cloud. DBE–controlled data residency. CBS stays DBE's.

Reuse / configure / build

Intelligence layer: reuse. Desks & engines: configure. Policy numbers: DBE Credit.

Success metrics

Days to first release, visit–gated draws, covenant hits, rehab vs foreclosure, audit retrieval.

A Low-Risk Path to “Yes”

Recommended engagement

1. Live demo: project file + lease asset + wholesale/fund window
2. Discovery: policy bands, desks, CBS contact, pilot products
3. Fixed-scope DBE pilot (not a PFI-only Excel rollout)
4. KPI review → network + optional PFI adoption

What we need from DBE

- Executive sponsors: Credit, IT, External Fund, Legal
- Confirm product catalog and committee names/bands
- Debt–equity, lease contribution, IFB markup rules
- CBS customer–API counterpart
- Pilot branches / directorates

Detailed commercial proposal (license, implementation, support) issued after discovery confirms scope. Price does not belong in this product pack.

CALL TO ACTION

Automate How DBE Releases Money

**One lifecycle. Seven engines. Credit Intelligence on every file.
Equity before loan. Proof before the next draw. Rehab before
write-off.**

Decide this week

1. Book the live iBOC demo for Credit, Engineering, Legal, External Fund, and IT
2. Name sponsors and the first two product families for pilot
3. Receive configuration SOW / MoU draft
