Subject: Submission of Proposal – Digital Loan Origination & Processing System

Dear Sir/Madam,

We are pleased to submit our proposal for the development and implementation of a Digital Loan Origination and Processing System for Lion Bank. This proposal outlines an advanced, scalable, and secure platform designed to modernize the bank's credit operations and streamline the entire loan lifecycle.

The proposed solution introduces a fully digital workflow that covers loan application, document verification, smart queue management, collateral GPS integration, automated collateral valuation, AI-assisted credit assessment, and multi-level authorization. By automating these processes and integrating them with the bank's core banking infrastructure, the platform will significantly reduce processing time, improve operational efficiency, and strengthen risk management practices.

Our system is designed to align with the operational structure of Lion Bank while ensuring compliance with regulatory standards established by the National Bank of Ethiopia. In addition, the platform incorporates enterprise-grade security, role-based access control, detailed audit trails, and advanced analytics capabilities to support informed decision-making and effective portfolio monitoring.

We believe this solution will contribute to enhancing customer experience, improving credit service delivery, and supporting Lion Bank's strategic vision of digital transformation and sustainable growth in Ethiopia's evolving financial sector.

We would welcome the opportunity to present this proposal in detail and discuss how the system can be customized to meet the bank's specific operational and strategic requirements.

Thank you for your time and consideration.

Sincerely,

Samrawit Gebreegzabher
